How to Install YouTube With No Ads on iPhone [No Jailbreak] — Full uYouPlus + AltStore Guide

A lot of people are asking how to get an ad-free YouTube experience on iPhone without jailbreaking. Here's a complete step-by-step guide using AltStore to install uYouPlus, a modded version of YouTube or any other custom ipa.

Requirements:

- No jailbreak
- No shady sites
- No Apple Developer account needed
- Works on the latest iOS
- 100% free

What is uYouPlus?

uYouPlus is a modded version of the YouTube app with advanced features:

- Blocks ads
- Saves video/audio to Camera Roll
- Native Picture-in-Picture
- Background playback
- Gesture controls for brightness, seek, and volume

Download the latest IPA:

<https://iosninja.io/ipa-library/download-uyouplus-ipa-ios>

Step 1: Install AltStore on Your iPhone

Go to <https://altstore.io> and download AltServer on your computer.

Mac Instructions:

- Download the `.dmg` file
- Open AltServer and install it
- Click the menu bar icon -> "Install AltStore" -> Select your iPhone -> Enter your Apple ID
- AltStore will install on your phone

Windows Instructions:

- Download and install iTunes and iCloud (NOT from the Microsoft Store)
- Download and unzip AltServer
- Run `setup.exe` and install AltServer
- Right-click the AltServer icon in the system tray -> "Install AltStore" -> Select iPhone -> Enter Apple ID

If AltStore doesn't install, make sure your phone is connected via cable and trusted.

Step 2: Trust AltStore on iPhone

Go to:

Settings > General > VPN & Device Management

Tap your Apple ID and tap "Trust".

Step 3: Download the uYouPlus IPA

Download the IPA from this trusted source:

<https://iosninja.io/ipa-library/download-uyouplus-ipa-ios>

Save it to your computer or your iPhone (If iPhone you can share and share to altstore).

Step 4: Install uYouPlus via AltStore

- Open AltStore on your iPhone
- Tap the "+" icon
- Choose the uYouPlus IPA (use AirDrop, Files, or iCloud to send it to your phone)
- Enter your Apple ID when prompted
- It will install as a native app

Step 5: Refresh Every 7 Days

Apple limits sideloaded apps to 7 days. Here's how to prevent expiration:

- Keep AltServer running on your PC or Mac
- Enable Wi-Fi sync in iTunes
- AltStore will automatically refresh your apps when both devices are on the same Wi-Fi

Or manually open AltStore and tap "Refresh All".

Tip (Windows): If wireless refresh doesn't work, restart the Apple Mobile Device Service:

Code net stop "Apple Mobile Device Service"

net start "Apple Mobile Device Service"

Troubleshooting & Extra Tips - You can install any custom ipa with this method without jailbreaking your phone.

- If Developer Mode is needed:

Settings > Privacy & Security > Enable Developer Mode

- Notifications only work with a paid \$99/year Apple Developer account

Optional: Add AltStore Sources

If you're using the AltStore beta, you can add sources like:

Code <https://quarksources.github.io/quantumsource.json>

More sources: <https://randomblock1.com/altstore/apps.json>

If this helped you...

Please reply, share your experience, or ask if anything's unclear. Hope this guide helped! ?
