Thread: [Hackin help NOW](#)

Martha49 - April 17, 2025, 6:04 pm

I need help

I look on forum. And it's impossible to know how to hack and on the recent threads it shows some of the code but no explain of how to use
The code? For example from this category

'How to build your own stealer part 2'
'SSH bruteforce/sprayer + file grabber & enum'

What do these even mean? And it doesn't make any sense??? Living in the UK sucks as no one helps me

When I have python script from the script what do I do? All I want to do is be the big hacker but it's like it's impossible to do. Help me please

DramaKing - April 17, 2025, 6:12 pm

No one is going to give you free help with that rude, entitled attitude. You don't understand because you haven't learned the basics of programming and operating systems and are impatient.

I cry blood - April 17, 2025, 6:35 pm

(Apr 17, 2025 06:04 PM)Martha49 Wrote: [\[CITE\]](#) All I want to do is be the big hacker but it's like it's impossible to do. Help me please
self being "the big hacker" was easy then everyone would be doing it. It's going to take several years of work and dedication. Also, repeating tutorials and using other people's code isn't the ticket to truly being a competent hacker. Anyone can do that. You need to be able to think technically, think ten steps ahead, be able to cross reference and build conclusions, have patience, be able to tinker and probe for long hours, etc. It's not just about the computer knowledge you're capable of consuming.

(Apr 17, 2025 06:04 PM)Martha49 Wrote: [\[CITE\]](#) I look on forum. And it's impossible to know how to hack and on the recent threads it shows some of the code but no explain of how to use
The code? No one is going to spoon feed you. The resources are there. You have the entire internet

at your disposal. Not everything comes with a guide.

(Apr 17, 2025 06:04 PM)Martha49 Wrote: [\[CITE\]](#) For example from this category

'How to build your own stealer part 2'
'SSH bruteforce/sprayer + file grabber & enum'

When I have python script from the script what do I do? Why struggle to comprehend the code when you don't even know what these tools are used for?

The ssh attack script you're referring to conducts both brute forcing and password spraying. Do you understand either of those concepts? Depending on your system, some of those imports may be dependencies you don't have already installed. Are you able to tell if you do have them? If not, do you know how to install them? Are you even able to execute that python script period? Also, can you tell if it even works or not? Does it use proxies or in any way manage to anonymize you? What timeouts does it throw? Is it multi-threaded? Etc...

This same line of scrutiny also applies with the stealer and really anything you do.

You're trying to run before you've even learned to crawl. You're going to get easily frustrated when you don't even understand the basics of things.

[\[GUIDE\] - WHITE HAT HACKING / CYBERSECURITY \(2025\)](#)

Your speaking words that are foreign to me. What is multi thread or all this stuff all I want is for it to be quick and easy to become black hat using the stealer tool and the ssh tool why are you making this more difficult than it needs to be?

(Apr 17, 2025 06:12 PM)DramaKing Wrote: [\[CITE\]](#) No one is going to give you free help with that rude, entitled attitude. You don't understand because you haven't learned the basics of programming and operating systems and are impatient.

There's no attitude. It's simply annoying that no one will give me anything to become black hat hacker using the tools

There are no magic hacking tools. There are no magic methods. Hacking is a field composed of many domains, and many sub-domains to these domains. It's not an easy field, it's not like in movies.

You don't want to start with the basics ? Then leave, ti's not for you.

Martha49 - April 18, 2025, 12:11 pm

There's no evidence that it's real plus it's fake so it's ok now help me

FrostMost - April 18, 2025, 1:47 pm

Dude Most of the newcomers here are newbies and we all come here for one objective it is to learn hacking but It doesnt work like in the movies. I myself am also a newbie in the field and I was also like u but then I understood that it is not a 2-3 day job U seriously wont be able to learn all of hacking and programming in your lifetime. It is just a massive field that requires passion, dedication and strategy. Forget this movies that u saw It is completely different in real life. Hopefully u will soon enough understand it. Just start with basics like python and linux with websites like TryHackMe and HackTheBox. yes it may be boring(well most of the time it is hard and boring lol) but It is what we have to learn
???

If you want easy, go catfish some people on dating sites. Nothing is easy in this line of work; that's why it's called 'hacking.'

Martha49 - April 18, 2025, 4:31 pm

This is what most people call an 'entitled attitude.' And what's your hurry? Casually dismissing the law enforcement agencies that certainly monitor HF and recklessly pursuing cybercrime has a good chance of ending your hacking career in a cell before long.

This is yet another example of why i stopped teaching, everyone wants to rush to the finish line without understanding that once you start learning the finish line is always moving further away from you. this applies to any field of study.

If you wish to enter any field no matter what you must learn the basics and keep expanding on the field you are in.

Another thing about online communications platforms they have both public facing groups of all kinds government and 3rd parties engaging with users, even a simple google search can tell you this is the case. The goal is to gather information similar to having an informant on the corner that buys drugs from drug dealers the same logic is applied online the end goal is to gather enough proof that they should be charged in a court of law.

From personal experience this is indeed the case i served 10 years in a federal prison because of my actions online the proof was presented in court documents.

DramaKing - April 18, 2025, 8:02 pm

Sure, and I'm with the mafia.

So you want a stealer and SSH password cracker. Do you even know what you would do if you were successful? And once again, it needs to be said that hacking is not something that you just pick up. It takes a lot of learning and a lot of patience, which you don't seem to have.

You could just search on YouTube, which is what ultimately prompted my journey. I did have basic cybersecurity knowledge and taken some IT classes. Now you might get something out of a hacking influencer like Loi Liang Yang. He does simple hacks for the masses and at least does demonstrations, even if they're not necessarily repeatable.

(Apr 19, 2025 04:16 AM)Martha49 Wrote: [\[CITE\]](#) IM NOT US

If you're European, you probably live in a near surveillance state. India also has strict laws. If you're in Brazil, you're more likely to get in trouble for posting on social media than hacking. Russians have been arrested for this, but their government largely turns a blind eye as long as the attacks target foreigners. Canada just increased its focus on fighting cyberattacks. India has the IT Act, etc.

But I've said enough. Here's what you want. This is called a batch file. Copy these commands into a text file and save it as 'python.bat' on your Windows computer. Copy the Python script into another text file and save it as 'stealer.py'

```
Code winget install -e --id Python.Python.3.13
powershell -c "Invoke-WebRequest -UseBasicParsing -Uri
https://pyenv-win.github.io/pyenv-win/install-pyenv-win.ps1 | Invoke-Expression"
powershell -c "(Invoke-WebRequest -Uri https://install.python-poetry.org -UseBasicParsing).Content
| python -"
set
PATH="%%PATH%%;%%HOMEPATH%%\.pyenv\pyenv-win\bin;%%HOMEPATH%%\.pyenv\pyen
v-win\shims;%%appdata%%\Python\Scripts"
powershell -c "(Invoke-WebRequest -Uri https://install.python-poetry.org -UseBasicParsing).Content
| python -"
cmd /c "poetry --version"
cmd /c "poetry new stealer & ^
CD stealer & ^
poetry init & ^
poetry add os json base64 sqlite3 Crypto.Cipher win32crypt shutil time platform pyzipper requests
uuid & ^
poetry shell & ^
python ..\stealer.py"
```
