Thread: [Anyone wanna guide me on how to make my own Silent Miner?](#)

**thhomelessman** - April 21, 2025, 3:19 am

I wanna learn how to mine crypto silently, I have decent knowledge and Im a VERY quick learner Im just too lazy to look for sources and would rather someone just tell me what to do. <3 appreciate it

[deleted]

message me there If I dont reply here in time

Hello Adrian Lamo, think like that : why someone who is making money with a technique would suddenly stop to take time for a random online to teach him how he could steal his business ?

Black hat people usually don't share their methods for free, they're here to make money, not to take care of potential competitors. Avoid any TG or Discord caiming the opposite, you'll get scammed.

Quick path : make your own miner (Monero / XMR), or buy an existing one, make it FUD, spread, and hope to earn some \$. Take a look at open-source ones, maybe start with something like XMRig with a crypter ?

Besides, sharing off-site communication is not allowed for regular members, don't forget to read the [Help Docs](#).

Yeah I get that Im really just testing out my luck, obviously I don't believe someone will help me but it never hurts to ask Ill continue trying to figure it out myself like every one usually does but in the meanwhile I may find someone who can if not "guide me" at least let me know which direction to go.

Can you recommend me any good open source ones that aren't outdated and have CPU and GPU mining? Ill probably take a while considering this isn't even where I wanna begin my journey but I may as well make it a goal of mine

Don't know, I'm a white hat (as you can see on my profile picture), I'm into this kind of activity ? maybe someone else could provide more up to date info

**malik257** - April 21, 2025, 4:06 am

Laziest approach is: Find Unam Sanctum silent miner source code, Use chatgpt to learn the code

**DarkG8** - April 21, 2025, 6:51 am

The easiest thing to do is probably stick a miner in the software:

Use XMRig (Monero) technology + hidden process:Download XMRig.

Configure config.json to a pool (e.g. MineXMR).

Package it in a legitimate software (e.g. in the game installer via Bat2Exe).

Another way, but probably more complicated, is Botnet:

Use technology - infection via RAT (e.g. Nanocore): Infect computers via phishing.

Install a miner (e.g. SilentXMRMiner).

Control via C2-server.

Important!: CPU limit: Set the miner to 50-60% utilization

Rename the process to svchost.exe. and disable logs

Use crypto miners (look for them on Darknet forums) to bypass AV.

How we will drain the coins:

1. Use anonymous wallets: Monero (XMR): Wallet GUI + Tor

Bitcoin (BTC): Mixer (e.g. Wasabi Wallet).

2. We will cash out like this: P2P exchanges (LocalMonero, HodlHodl).

Cryptocurrencies (e.g., Binance Card).

CPU miners: XMRig (Monero, RandomX)

SRBMiner-MULTI

GPU miners: GMiner (NVIDIA, AMD)

TeamRedMiner (AMD)

T-Rex Miner (NVIDIA)

Universal (CPU + GPU):NanoMiner

WildRig Multi

Here is a table for better understanding (my opinion):

Criterion - Best Choice:

Coin (Monero, CPU) - XMRig

Coin (Ravencoin, GPU) - GMiner / T-Rex

AMD GPU - TeamRedMiner

NVIDIA GPU - T-Rex

CPU + GPU in one - NanoMiner

hello! miner in marketplace gets lots of people.  
there is fallen miner i saw here, maybe for replace unam sanctum. here is fallen

<https://hackforums.net/showthread.php?tid=6289989>

[DarkG8](#) you should make thread, very helpful

Hey, nice info. But how can you get it in a exe file or jar file. Is that even possible?

Very useful? but how you package the miner into a legitimate software using bat2exe?

**patchdev** - September 5, 2025, 3:28 pm

use venice ai to guide you it got no ethical boundaries
