Thread: [good ways to test dos tool?](#)

cheselol - May 1, 2025, 6:51 pm

I made a TCP SYN flood program and I am wondering if there is a way to test the effect on the receiving end. can something like wireshark detect packets with unfinished handshakes?

DramaKing - May 1, 2025, 7:03 pm

Wireshark is not what you want. You'll quickly crash it. Try this:

```
Code #!/bin/bash
sudo apt update
sudo apt install apache2
sudo apachectl start
```

I'm on Windows 10, this seems like its for linux. any workaround or something else?

Oh, I feel bad for you. Well, you don't want to test DDoS on localhost, but if you're just trying to test basic functionality, a quick Wireshark capture is an option. Otherwise, try this old thing:

```
Code winget install -e --id ApacheFriends.Xampp.8.2
```
