Thread: [Private Red Team C2 - Beta Testers Wanted](#)

Korsta - May 6, 2025, 8:04 pm

I'm looking for a small group of serious testers to evaluate my post-exploitation red teaming framework.

Some features include:

- Easy to use GUI
- Fully encrypted TCP C2 including:
 - File explorer
 - Process viewer including memory dump capabilities
 - Keylogger and clipboard logger

* note that a http C2 is in the works but not yet complete.

- Fully customizable builder including:
 - Injection customization
 - Startup Persistence & watchdog
 - Assembly customization

Note that this is a legit red teaming tool, not an off-the-shelf RAT.

I'm not posting links or branding here — I'll share access with testers individually after a quick conversation.

Skids will be ignored. If you're experienced or interested in red teaming, PM me.
