Thread: [Edit/gain admin access on websites](#)

valefar - May 7, 2025, 7:22 am

Hey, is it possible in any way to gain admin access to a site and edit the site completely like adding pictures?

Tried sql injection a few times and it didn't really work

SIM-5630113 - May 7, 2025, 7:39 am

First at all you must know which CMS is the website running.

After , which version.

And just after that you'll know how to exploit the database.

SQL Injections doesn't work in all systems

DramaKing - May 7, 2025, 7:45 am

Yeah, there's CMS admin, cPanel admin, and FTP. Sometimes you just have to login to the web host.

Hi, welcome to HF!

You can attempt to find the admin login using a tool like DirBuster or Dirb. [Click here for DirBuster's Sourceforge page.](#)

On Ubuntu, Debian, or Debian WSL:

PHP Code

```
<?php
```

```
# Install Dirb like so:
```

```
apt update; apt install dirb
```

```
# Usage:
```

```
dirb {target_website}
```

If you need concrete examples of how this is done, your Google keyword should be "Exposed admin panel".

SSH is also another option. Check out [DigitalOcean's guide on how to connect to SSH.](#)

Cheers!
