Thread: [steam brute force](#)

uzi69 - May 9, 2025, 7:23 pm

any good software for steam brute force ?

Charlie Sheen - May 9, 2025, 7:31 pm

For 99% of applications brute forcing is dead. Steam is definitely one of them.

Pr0m3th3us - May 9, 2025, 7:36 pm

What do you mean? Brute force a PW of an account?

uzi69 - May 9, 2025, 7:37 pm

It won't work when it comes to hacking a steam account.

Most of platforms now have brute-force protection, few examples :

Hashed Password protection :

KDFs (Key Derivation Functions) – e.g., bcrypt, scrypt, PBKDF2, Argon2 (slow down brute force by design)

Salting – adds uniqueness to hashes, prevents rainbow table attacks

Pepper – adds a secret value to the password before hashing (not stored in DB)

Key stretching

Web & Application-Level Protections

Account Lockout – temporarily lock account after N failed attempts

Rate Limiting – limit login attempts per minute/hour

Captcha – require user interaction to block bots

Progressive Delay – increasing wait time after each failed attempt

IP Blacklisting / Banning – deny access from known malicious IPs

Geo-blocking – restrict access to certain regions

User Agent Filtering – block suspicious clients

MFA - Multi Factor Authentication (SMS, app, email, ...)

With an optimal config it should be good to hack random accounts, but if you want to hack a specific steam account, openbullet it's not what you are looking for.
