Thread: [Looking for Monetizing Techniques, No Programming Skills](#)

stolickovystol - May 16, 2025, 2:15 pm

Hi everyone,

I'm currently exploring ways to make money online, but I don't have any programming skills. I understand that coding can open up many doors for advanced opportunities, but I'm hoping to find techniques that don't require any technical expertise.

Has anyone here successfully made money online without knowing how to code? I would love to hear your suggestions, tools, or methods that are beginner-friendly and don't require programming knowledge.

Thanks in advance for your help!

Yea me i use affiliate marketing and content creation method

The way it works is you need to choose a niche like : spirituality ,welath ,make money ,lose weight etc

Next you need to choose some affiliate offers related to your niche and if someone buys you get a comision from the sale

You can start a youtube channel and create videos in your niche, or a bog also you can post short form content on tiktok ,pinterest ,instagram etc

The thing its you need to add value to people and solve their problems

Fro time to time you recommend your affiliate offer and place them also on your bio link etc

The thing with this you need to have some patience as you cannot expect to make a lot of money the first week
