No, AI does not always use markup language by default — but it often does when:

? Situations where AI uses markup (like HTML, Markdown, LaTeX, etc.):

You ask for structured output (e.g., tables, formatting, code blocks).

You're working in a platform that interprets markup (like a forum, documentation tool, or website editor).

You're requesting things like:

□ Web design (HTML/CSS)

□ Document formatting (Markdown, LaTeX)

Code generation (JSON, XML)

? AI doesn't use markup when:

□ You're asking plain-language questions or conversational answers.

□ Markup would make the result harder to read or irrelevant.

The platform or context doesn't support rendering it.

? Example:

[b]TaskDoes AI use markup? ----- "What is 5G"? No (plain text) "Write an HTML login form"? Yes (HTML) "Give me a Markdown table"? Yes (Markdown) "Summarize this news article"? No (text only) [/b]

If you want AI to avoid or use markup, you can just specify that in your prompt (e.g., "Don't use HTML" or "Give it to me in Markdown"). Want me to show some markup vs. non-markup comparisons?
