Thread: [Robust & lightweight RAT/Botnet](#)

jonathanmew1295 - May 18, 2025, 2:21 pm

Sleek, Animated GUI

An intuitive, fully modular graphical interface lets you manage all client and server operations effortlessly. Interactive elements and animation enhance usability, while the modular architecture makes it simple to extend functionality.

Clean, Well-Structured Codebase

Built with clarity in mind: all code follows consistent camelCase conventions, meaningful naming, and comprehensive inline documentation. No junk code or confusing logic, this is a platform designed to be read, understood, and built upon.

Proven Performance & Efficiency

Engineered for performance. Both client and server are lightweight and have been tested successfully with up to 200 concurrent clients on standard desktop hardware. Smooth, efficient communication with minimal resource overhead.

Single Package Build System

Both the server and client stubs are written entirely in C++. A built-in builder within the server application means no need to separately compile the stub, streamlining deployment, unlike most C++ RATs or botnet frameworks.

Expandable Feature Set

Currently includes a robust set of core functionalities: payload execution, client stacking, system and user data retrieval, file extraction, and keylogging. While these features are intentionally minimal to maintain performance and clarity, the modular design makes it perfect for developers looking to expand capabilities quickly and cleanly.

Beginner-Friendly Yet Powerful

Thanks to its clarity and simplicity, this framework is accessible even to novice C++ programmers, yet powerful and stable enough for advanced users who want to build custom tooling or integrate with existing infrastructure.

NOTE: Due to forum restrictions (under 50 posts), I'm unable to share screenshots or video demonstrations publicly. Please inquire via direct message for a private demo or further technical details.

Asking price is 200\$ in BTC, I am not looking to haggle or prolonged negotiations which is why I am selling it for so cheap.

Could I get proof? If it's as you say in your post, I'll give you an honest rating.

Sure, how do I provide proof?
