Thread: [Finding a Payment Gateway Specialist](#)

webzen - May 20, 2025, 2:28 pm

We are currently looking for an experienced Payment Gateway Specialist who can create and maintain payment gateways from outside our country. The specialist must be capable of setting up and activating gateways for:

- PayPal
- Credit/Debit Cards
- Cryptocurrency payments

Our business operates in the IPTV industry, and we will provide all necessary legal documentation and compliance support required for the gateway setup.

Your responsibility will be to create, integrate, and activate the gateways. We will handle all paperwork, registration, and business verification needs — your focus should be on the technical setup and activation of the gateways.

Requirements:

- Experience with international payment gateway setup
- Familiarity with PayPal, card processors, and crypto gateways
- Able to work independently and deliver results quickly
- Knowledge of legal and compliance considerations for IPTV and payment processing (preferred)

Note: This is a contract/freelance role. We are ready to begin immediately with the right expert.

If you have the required experience, please reach out with your past work examples and rates.

Please be mindful of who you do business with. Make sure to always use a contract if you do go thru with a deal. Stay mindful of scammers looking to speak to you off-site, requesting payment upfront prior to actually showing you any proof that they can provide what you're looking for.

stripe & coinpayments is all what you need

DrunkScottie - May 25, 2025, 7:08 am

I have a personal contract with a merchant services company, and am a web developer by trade. I can make this a reality 1:1.

Send over a contract, and lets talk over the details.
