Thread: [Looking for a Auto Email Acc Maker!!!](#)

ProxyLand - May 21, 2025, 9:37 am

Hello Hackforums!

This is gonna be a simple thread. So, i am 100% burnt out right now from learning Puppeteer and Node.js and made a Jagex Account Creator.

Right now it uses temporary email address. But i want to upgrade it to use a preloaded list of premium emails. So im looking for email acc creatorsfor any of the following: AOL, Hotmail, Yahoo, Gmail, Protonmail or any other email service that isn't a temporary email service.

Please let me know if you have such programs already, and could possibly share, or point me in the direction of completing my goal on my own! Thank you HackForums!

Creating Premium Emails, is going to require you to have bulk SMS.. as all Premium Emails require a new phone number to create an account. Your best bet would probably be to connect with someone who sells these type of emails in bulk, as they can provide you with a bulk discount, and configure your bot to to be able to load, and login to the emails, and running your bot like that. Having the bot create the emails, and then create the Jagex account, is going to open a whole new door of problems, as bulk premium email creation isn't the easiest.

I was fearing that, but I feel this might be the only way. Haha.

Unfortunately, I think I would rather churn em out manually by hand within a hour period and save and compile em up And then boom, bust bot out and there's my weekly allotment Imfao.
