Thread: [3z MITM Advanced Live Panel Account Phisher & Source code creation!](#)

Wispr - May 22, 2025, 4:34 pm

? Hey HF! ?

Today I'm bringing you two incredibly advanced tools that are designed to elevate your digital capabilities to the next level. Introducing 3's Account Hacker/Phisher .

? PRODUCT #1: Kraken — The Ultimate MITM Account Phisher/Hijacker with 2FA/OTP Integration (SMS & Email) ?

Kraken is an advanced platform that allows you to create convincing replica websites for man-in-the-middle (MITM) account phishing and hijacking. With its robust features, you can seamlessly intercept and manipulate user sessions to gain unauthorized access.

? Key Features:50+ High-Quality Templates for Global Platforms

Localization: Templates available for every country

Real-Time Session Monitoring

Responsive & Fully Customizable Interface

OTP/2FA Handling Features

? Price: \$200 Lifetime Access

? See It In Action:

[Video: <https://youtu.be/a8uZTovw1xA>]

? [Click here to watch the video demo](#)

? PRODUCT #2: Custom 1:1 Website Code Solutions ?

Need a tailor-made solution for your phishing attacks? This product offers exact 1:1 replicas of any digital platform or website, complete with telegram and email integration, ensuring a seamless phishing experience.

? Features Include:Exact Design Match to Target Platform

2FA/OTP Functional Modules

Integration with Telegram + Email Services

100% working AntiBot

Fast Delivery & Support

? Pricing: Premade Templates: \$100

Fully Custom Code: \$200

Nice find. Didn't know you could code. Would be nice to see that video. Is there any benefit to this as opposed to evilginx beyond more premade phishing pages?

I'd be interested in what [Chornaya Magiya](#) has to say. This is his area.

I'd be interested in what @Chornaya Magiya@ has to say. This is his area.

I can indeed code, I'm not a wizard or even dare I say great at coding. This is one of the first projects I've tested my coding skills on besides basic programming. I can't take all the credit though another user collabed and helped me with the site we worked on it together, he helped me for lifetime access to the finished product which benefited us both because then I knew he'd actually care about the final product. The YouTube video demo should be viewable now. Maybe you could checc it out and tell me what you think since you're one of the few HF users whose opinion means a lot to me.

Edit: Funny thing about your question about evilginx ? I literally made the same comment you just made on someone else's thread a couple days ago but to answer your question , it's functionality does pretty much the same thing however it can be hard to create a custom phishlet or even use evilginx for some people, especially if you have no coding knowledge. This would be the fastest way someone could just use the site annd get to phishing Especially because the dev just release v3 and is only letting verified professional red teamers buy it. But yeah I spent a lot of time making this available for all countries and users. I had to find what the major banks were for each country and implement them. It was a pain in the ass. But I think the finish product was worth it

These are what's commonly known as "scam live pages"—setups where you have to be online 24/7, manually handling each visitor and tricking them into giving up OTPs by fetching fresh .html pages whenever you need a code from their email or phone.

This isn't a typical MITM (man-in-the-middle) attack like modern tools such as Evilginx or Astaroth, which can automate the entire process from start to finish. Before tools like that existed, people relied on those scam live pages that OP sell to grab cookies or perform hidden actions manually. But since that approach is time-consuming, most have switched to MITM methods, though those come with a much higher price tag unless you know how to code but then everything is automatic.

I won't get too deep into it, especially since the OP seems like a good guy. Still, these techniques have been around since the early 2000s. They definitely still work, but they require hands-on attention for every single visitor. That said, if you're willing to put in the effort, you won't find a more effective option for this price that OP offer.

Thank you for the break down and kind words. You're definitely right. The knowledge you bring on these subjects is other worldly. These are my starting coding projects, hopefully with more experience and learning I'll keep growing as a programmer. You should think about mentoring bro. You have a rare unique ability to easily explain & teach concepts so that anyone can understand it. If you can shoot me your tele in a pm so I can add you on telegram. I can never have enough knowledgeable hf homies to learn from, get advice & bounce ideas off of.

DramaKing - May 23, 2025, 2:34 am

This scam live page setup is definitely unfortunate. Having to manually login and send OTPs will require very quick responses. Another thing I forgot to mention: I remember something about OP not using AV, and I don't see Chrome in the video. It's entirely possible that he doesn't realize that 1:1 clones trigger phishing detection.

That's literally why there's a second product on this sales thread. Ive also included and updated the antibots.. with proof. I've had that same scampage up for 2 weeks and hasn't been detected or removed. I can upload proof if needed lmk. What I mean by 1:1 is that the phishing page will look identical too the source. Not that the code is 1:1 to the target site. Obviously there's no page on Wells Fargo's website that asks for cc or OTP.

TWIXX - June 28, 2025, 10:58 pm

Reseller?

Not good

Wispr - July 1, 2025, 7:24 am

Noo not reseller that was my partner. However we are undurgoing maintence for that service so as of right now... Only custom phishing pages will continually to be made... They looked better and are more efiecnt anyways,
