FAQ!

What is Remote Desktop Protocol (RDP) ?

The Remote Desktop Protocol (RDP) is an innovative approach that allows you to access your Windows system remotely, without being physically present at its location. With RDP, users can harness the power of a Windows server virtually anywhere and at any time. Developed by Microsoft Corporation, this protocol was designed to bring the Windows server experience to your own residence.

Using RDP is remarkably user-friendly. It's as simple as clicking an icon to take charge of your Windows system from an external computer or smart device. Notably, RDP facilitates the sharing of mouse and keyboard inputs with the remote device. This means that users utilizing remote desktop control can interact with their Windows computer as though they were right in front of it. The environment it creates is an exact replica, allowing you to work seamlessly.

The significance of RDP's capabilities has contributed to its widespread popularity among users. If you're seeking more comprehensive information, we invite you to delve into our detailed guide on the topic. It provides an in-depth understanding of the functionalities and benefits that RDP brings to the table.

To explore further, please refer to our comprehensive RDP article.

Do these server have root/admin permissions?

Our RDP servers offer dedicated Windows environments with full administrative permissions. This means you have unrestricted access and control over your server, allowing you to install software, manage configurations, and tailor the environment to suit your needs.

What is the delivery time for RDP server & account details after payment?

Upon successful payment, your RDP account details are provided with exceptional efficiency. The deployment of your RDP is instantaneous, and you can expect an automated Windows installation within just 5 minutes.

To access your account, login credentials will be sent to your email address.

Furthermore, for your convenience, these login details are also readily accessible within your dedicated client portal. This ensures that you can swiftly begin utilizing your RDP service without delay.

Is port 25 open and can I use RDP for mailing?

Our services support the utilization of RDP for mailing purposes, including SMTP (Simple Mail Transfer Protocol).

If you wish to enable Port 25 for SMTP, you have the option to do so by selecting our supplementary service, available at a nominal cost of \$5.

This feature provides you with the flexibility to enhance your email delivery capabilities and optimize your mailing experience.

By availing this option, you ensure seamless and efficient utilization of RDP for SMTP, meeting your specific mailing requirements with ease.

Feel free to explore this option within your plan settings to unlock the full potential of our services for your email communication needs
