Thread: [Private AI Engine Full Autonomous Execution on Volatile Platforms \[LIMITED SALE\]](#)

Mr.x - May 27, 2025, 7:44 pm

? Private AI Automation Engine | Fully Autonomous System for Pattern-Based High-Frequency Execution

This is a limited-release AI system built for advanced pattern recognition, adaptive risk control, and long-term automated strategy execution on volatile platforms.

No public release. No trial. Not for beginners.

This is a serious tool developed for persistent, low-risk, intelligent automation — designed from the ground up.

? Core Capabilities:

- Dynamic Decision Architecture w/ Self-Correction
- Platform Adaptive (via DOM/CSS/WS detection)
- Fully autonomous execution, real-time adjustment
- Human-like simulation & trend awareness

? Real-Time Demonstration:

Live execution sessions + past performance:
Hackforums Dont Allow To send.

? Offer:

Price: 15 BTC

Affiliate Cut: 1 BTC per confirmed sale

? Source not shared. Custom execution key required. Serious inquiries only.
[contract=tid]Start Contract[/contract]

15 BTC for some vague AI automation tool, sight unseen!? Are you out of your mind!?

NoBadReviews - May 28, 2025, 6:59 am

You can't be serious lmao

"How can you say you've never seen its performance?

The GitHub link : mr-xneuro.github.io/neurobet-demo/

, live demo recordings, and previous livestreams are all publicly accessible — and more livestreams are on the way. This is a fully serious research-grade project, backed by months of development, testing, and live deployment. NeuroX is not just another automation tool — it's a multi-layered, self-correcting analytical system with anti-deception architecture, statistical modeling, and adaptive learning. Before jumping to conclusions, I encourage you to actually review the available resources."

Please read the material thoroughly and seriously, without any mockery. The GitHub link and details of its outstanding performance are available:

mr-xneuro.github.io/neurobet-demo/

— you can check and see for yourself. A scientific paper on its functionality is also being prepared for publication on one of the most reputable research platforms.

Then market it to some corporations.

You're talking about \$1.5m. Nobody will be willing to pay that to gamble on freebtc.

Even if it does work, It's most probably not financially reasonable to run the model. You would have bankrupted freebtc yourself if it was feasible, you would not be selling it.

If you're looking to sell it for 15 BTC, good luck to you, you're positively insane.

I have access to technology, I have no intention of attacking the site. If I wanted to, I would sell a hundred copies of it for one licensed BTC each.

There is also a scientific article for it, the buyer can decide to upgrade it to similar sites with similar programming. This system is not just for one site, but it is actively embedded for a site, which programming is time-consuming and requires costs, and I do not plan to adapt NeuroX to another site, at least for now.

If you help me sell this technology, I will give you a commission of one bitcoin.

If you help me sell this technology, I will give you a commission of one bitcoin.
I'll help you use it to profit from freebtc + other sites for 40% of the profit.
If it is as good as you say it is, it'd make far more sense to use the technology yourself rather than selling it.
Will send you a PM.

NeuroX would need to be rewritten for other websites, which itself is a time-consuming and costly process. As for revenue sharing — no, I intend to sell the script outright.

NeuroX is not just about betting. It has a unique design in the fields of AI, autonomy, decision-making under uncertainty, deception detection — and even deception generation — to identify true patterns. Engineers and researchers could explore it further for future AI studies.
This is not an ordinary bot.
As you can see, its scientific papers will gradually be published
