Thread: [CSS Help for 10,000 Bytes](#)

Omniscient - June 13, 2025, 12:28 pm

In Convo since some css updates and other alterations it seems some space is created on the left side.

Reward of 10,000 Bytes to first person who can give me the fix.

Relevant css files...

https://hackforums.net/cache/themes/theme12/convo_8.css
<https://hackforums.net/cache/themes/theme12/response.css>
<https://hackforums.net/cache/themes/theme12/global.css> (likely not the problem)

7 - June 13, 2025, 12:39 pm

```
global.css
.wrapper-content {
width: 100%;
max-width: 1525px;
margin: auto;
opacity: 85%;
z-index:-1;
}
```

```
previously
.wrapper-content {
width: 95%;
max-width: 1525px;
margin: auto;
opacity: 85%;
z-index:-1;
}
```

Same with thread content..

Omniscient - June 13, 2025, 12:39 pm

(Jun 13, 2025 12:34 PM)m0hx Wrote: [\[CITE\]](#) here's userscript that fixes it:

```
Code // ==UserScript==
// @name      ? Fix Uneven Left Margin on HackForums
// @namespace  https://hackforums.net/
// @version   2.0
// @description Fully removes left space on #panel by overriding bad width calculation from
global.css
```

```
// @author      m0hx
// @match      https://hackforums.net/*
// @grant      GM_addStyle
// @run-at     document-start
// ==/UserScript==
```

```
(function () {
    "use strict";

    GM_addStyle(`
        #panel {
            width: 100% !important;
            margin-left: 0 !important;
            margin-right: 0 !important;
            padding-left: 0 !important;
            padding-right: 0 !important;
            box-sizing: border-box !important;
            max-width: none !important;
        }

        body, html {
            margin: 0 !important;
            padding: 0 !important;
        }

        .wrapper, .wrapper-content {
            width: 100% !important;
            margin: 0 auto !important;
            padding-left: 0 !important;
            padding-right: 0 !important;
        }
    `);
})();
```

gpt:
After reanalyzing your global.css, this spacing issue is most likely due to this line in your current layout:

```
#panel {
    width: calc(95% - 50px);
}
```

This subtracts 50px only from the left, effectively shifting the entire panel to the right, creating that space.

gpt2:
The issue stems from this CSS rule in global.css:

Code #panel {

```
width: calc(95% - 50px);
}
```

This line subtracts 50px from the total width, which effectively pushes the layout away from the left side only and breaks centering. It's not offset evenly on both sides.

Please update the #panel style to this:

```
Code #panel {
  width: 95%;
  margin: 0 auto;
  max-width: 1525px;
}
```

Or, even better:

```
Code #panel {
  width: 100%;
  max-width: 1525px;
  margin: 0 auto;
}
```

Can the fix be in response.css or convo.css for an @?

Omniscient - June 13, 2025, 12:43 pm

Tested

```
#panel {
  width: 100%;
  max-width: 1525px;
  margin: 0 auto;
}
```

That doesn't seem to make any change to convo. Because the issue is only in convo, I have to believe it's inside that css (or maybe response.css).

The panel isn't even shown in mobile view.

7 - June 13, 2025, 12:45 pm

Before

After

Omniscient - June 13, 2025, 12:45 pm

global.css

```
.wrapper-content {
  width: 100%;
  max-width: 1525px;
  margin: auto;
  opacity: 85%;
  z-index:-1;
}
```

Makes no change to Convo.

EDIT: I take it back, that does seem to matter. Let me try it live file.

7 - June 13, 2025, 12:46 pm

I personally dont think the gap is required.. Looks cleaner without

7 - June 13, 2025, 12:49 pm

Mobile UX/UI dont usually have a padding for background anyway imho..

Give the bytes away.. im just trying to help

Omniscient - June 13, 2025, 12:50 pm

[7](#) that fixed it, thanks...sending you 10k Bytes.

And I do recall that css being altered when I was changing theme elements. I think I took the existing 95% that was in .wrapper but yeah, it should be 100%.

If anyone seems a problem from the change LMK. Else it's back to looking normal imho.

Thanks to all. Appreciate it.

7 - June 13, 2025, 12:51 pm

No problem ... Jump in convo... Guys it's yours anyway

7 - June 13, 2025, 12:53 pm

Everyone in convo 10 winners of 1k..

I dont need the bytes...

[Clumsy](#) What does that mean there is a directory traversal in the css?

I have intentionally allowed the images in the directory because eventually I'll make them chooseable backgrounds.

<https://hackforums.net/images/backgrounds/>

There are a few image folders on HF I have done this with...

<https://hackforums.net/uploads/awards/>

<https://hackforums.net/images/groupimages/custom/>

A little Easter Egg I suppose.

A little Easter Egg I suppose.

Those images brought back so many memories. Pure nostalgia but I really miss those old clunky userbars versus the newer snazzier ones. Reminds me of the older internet when things weren't as polished.

Omniscient - June 18, 2025, 12:38 pm

(Jun 18, 2025 12:34 PM)Natha Wrote: [\[CITE\]](#) Wow, first time I have seen
<https://hackforums.net/images/groupimages/custom/>

That is nostalgic right there.

This is OLD

If anything it goes to show the importance of increase image sizes. I really gotta do something about the Awards.

Omniscient - June 18, 2025, 12:46 pm

(Jun 18, 2025 12:44 PM)Natha Wrote: [\[CITE\]](#) Where are most of the award images from? I tried to place a few in an AI upscaler but it just doesn't work - they are too small, I guess?

I tried to search Google for some of the awards and nothing comes back with any matching results of similar/the same icons.

From an ancient part of the internet. Most of the icons are from a paid license to a designer I got them before HF, over 20 years ago. I have folders and folders of icons from that era which nobody has.

Omniscient - June 18, 2025, 12:57 pm

(Jun 18, 2025 12:49 PM)Natha Wrote: [\[CITE\]](#) Ah right, hence the background in an attempt to avoid ripping.

Yeah, I thought so - I couldn't find them anywhere - were they all 24x24 off the bat?

Why are you wanting them to be done bigger if they look good on the postbit?

I have some of them in larger sizes up to 64x64 I believe but not all of them. I would love for the award to go 32x32 just so that they can be more detailed. 24x24 is extremely limiting.

Goku - June 18, 2025, 3:38 pm

[Omniscient](#)

Glad this got fixed, but, I notice that the search button on mobile looks too small. You can fix it by setting the height to auto instead of 27px and set the margin-top to 0px instead of 2px while you're at it. It seems that this styling is done inline (In the HTML).

This change would be nice on desktop and mobile.

Before:

After:

Code:

Omniscient - June 18, 2025, 4:30 pm

[Goku](#) To me your before and after look the same when it comes to the Search Button. On your after the profile is purple though. I'll try your adjustments soon as I get a moment.

Also, much of that is inline css because of Cloudflare caching css files and we don't like enabling dev mode.

Omniscient - June 18, 2025, 8:25 pm

(Jun 18, 2025 05:09 PM)Natha Wrote: [\[CITE\]](#) Your new userbar is growing on me. I think it matches the rest of the site as well as the other userbars.

I've should have marked in the screenshot what I was referring to.

Oh and, the reason my profile is purple in the after is that I'm using inspect tool to simulate mobile view and on mobile there is a "hover" effect

In general, we use inline css as a last means. But, I do understand what you mean, and I would have done the same haha.

I also like to state that I like the style HF has taken lately, looks superb!

Omniscient - June 19, 2025, 12:24 pm

[Goku](#) thank you for clarifying. I'll add your CSS shortly.

cellular - June 19, 2025, 4:41 pm

I tried to search Google for some of the awards and nothing comes back with any matching results of similar/the same icons.

For those who remember MyBBCentral, of which I was a paid member, it was ran by [Omniscient](#) the original 1.4/6.x award plugin came with a fair few of the oldest awards that you can find on HF still today packaged with the plugin. Hundreds of icons if I recall.
