The framework is built for use in adversary simulations, phishing awareness training, and advanced web-based testing scenarios. It enables push-based payload delivery, simulated malware spreading, and realistic phishing engagements, all executed through native browser interfaces in controlled environments.

eliotjames - October 15, 2026, 2:32 am

Jeez this looks advanced and seems to have a lot to it. I will certainly be checking more onto this and reading all the post comments, based on the images it looks very high quality and clean. The gui looks easy to use and I think it would be easy to get comfortable with quickly. It looks bloody expensive but for todays market thats the average.
