Hello there... With this I can add for example a .txt file with 100k+ emails and it will send email to all?

This looks very nice.

Do I need to purchase my own SMTP to work with your software?

Can I send emails with attachments such as .doc or other file types?

Can I send emails with a spoofed sender address?

What is the inbox percentage for services such as Gmail, Hotmail, Yahoo, etc.?

I need this service, and I'd like to know if emails sent by this software will end up in the spam folder. Besides the software subscription fee, how much does it cost to purchase the SMTP, service?

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Hi, I'm interested in the program. Does it work for sending emails to Hotmail or Outlook?
