Thread: [Send Blaster Stable Build 2025](#)

anonav - June 20, 2025, 11:12 pm

? What is SendBlaster?

This Version of SendBlaster is a modified Bulid of SendBlaster its a Windows-based email blaster a standalone, offline tool that sends mass emails directly from your machine via custom SMTP servers. It doesn't rely on web panels or third-party platforms. That makes it a preferred choice for blackhat

? 1. Local Execution = Total Control

SendBlaster runs locally on Windows.

No cloud panel. No browser history. No remote logs.

The only logs are the ones you export — or delete.

? 2. Custom SMTP Injection

Supports any SMTP server, including:

Free Gmail (limited)

Paid SMTPs (Mailgun, SendGrid)

Bulletproof SMTPs (if you source them)

Configure port, TLS, SSL, username, etc.

? 3. Real Merge Tag Personalization

Automatically injects dynamic data into emails:

#email#

#name#

#custom1#, #custom2#

Used by phishers to send: Hello #name#, Reset your password here: [

<https://fakebank.com/reset?user=#email#>]

? 4. HTML Payload Capable

Full HTML email support (no restrictions).

Embed phishing pages, fake forms, cloned branding.

Drop direct links or obfuscated redirections.

Can include base64-encoded images or logos.

? 5. From-Spoofing Capabilities

Fully customizable "From" fields:

From: Apple Support <support@applemail.com>

Reply-to: attacker@protonmail.com

Custom return paths & reply headers (within SMTP protocol limits).

? 6. Contact Importer

Load thousands of emails from:

.CSV

.TXT

.XLS

Add custom fields for dynamic content control.

? 7. Auto Bounce Filtering

Connect POP3 inbox to:

Detect failed sends

Clean invalid addresses

Maintain a high-quality (and low-risk) list

? 8. Dry-Run Testing

Send test emails to burner inboxes.

Manually review headers, spam score, and inbox placement.
