Thread: [Userscripts and HF Rate Limits](#)

Omniscient - June 25, 2025, 12:16 pm

I have started to make adjustments to HF's firewall settings on the server and do some rate-limiting. Over the past 2-3 days catching bots and stopping DDoS. But the false-positives I am getting from members seems to be related to browser userscripts. Especially ones for Convo. So if you're being blocked using HF, disable any userscripts and wait 10 minutes.

Thank you.

Thank you for the information bossman. We, the OG Convo Squad, will keep that in mind and spread the news.

I'd be curious to know what userscripts are doing in the background related to convo.
I can't think of a good use case for them for convo

Thank you for keeping HF safe.

Top priority is always keeping HF safe, and then we just need to adjust our own scripts accordingly.
