Lotus Adversary Emulation Platform

A professional C2 framework for Red Teams to validate defensive controls and simulate adversary TTPs in authorized environments.

Capabilities

Spoiler ([Click to View](#))

Endpoint Security Validation (MITRE T1562)

Test your EDR and AV alerting for critical tampering events. Policy Test: Add C:\ to Windows Defender exclusions to verify configuration change alerts.

Health Check: Spoof a "healthy" security provider to test if your SOC can detect a disabled agent.

Dynamic Evasion & Execution (T1055)

Challenge signature and behavioral-based defenses with novel payloads. Polymorphic Engine: Per-target build engine generates unique, layered stubs to test detection depth.

In-Memory Execution: Utilize Process Hollowing to bypass basic AV and test memory analysis capabilities.

Persistence & Eradication Testing

Validate your Incident Response team's ability to fully remediate a threat. Multi-Point Watchdog: Establish resilient persistence across files, processes, and registry keys.

IR Challenge: Designed to outlast incomplete cleanup procedures to test the thoroughness of your playbooks.

Forensic Integrity Simulation (T1014)

Ensure your analysts can trust their tools during a live investigation. User-Land Cloaking: Hide files, processes, and registry keys from standard user-land APIs.

Tooling Validation: Test if live response tools can detect and see past manipulated API results.

Credential Access Simulation (T1003, T1555)

Demonstrate the impact of a compromised endpoint and test credential access defenses. User Data Exposure Test: Emulate theft of stored browser & application credentials such as chromium, Firefox, Telegram, and Discord.

Architecture

Spoiler ([Click to View](#))

Lotus Server/Client is written in .NET 4.6.2

The Lotus Frontend webUI requires Node.js installed.

LICENSING

Lotus is sold exclusively to vetted members for legitimate security testing. A signed EULA and verification are required.

PROFESSIONAL TIER

One Month: \$45 | Three Month: \$109 | One Year: \$449
Core C2 Platform (Server & Client)
unencrypted

Payload Execution

Interactive Shell & File Transfer

ENTERPRISE TIER

One Month: \$149 | Three Month: \$349 | One Year: \$1199 | SOURCE CODE: \$2499
Includes everything in Professional, plus:

Advanced Modules: EDR/AV Evasion, Persistence, Watchdog, Cloaking, and Credential Access Simulation.

Dedicated Support

[Video: <https://www.youtube.com/watch?v=J5izXqd9c-0>]

To acquire a license, begin the vetting process by contacting me via DM. Do not start a contract before DMing me.

(Jun 30, 2025 06:42 AM)ServersFxcked Wrote: [\[CITE\]](#) Very well built, quick and easy GUI everything easy to find

All functionality working as advertised, stability is good no crashes and very smooth operation

Build Size was small only 400kb, with all functions enabled

PS: Vouch Copy

LEGAL NOTICE: For authorized security testing by vetted professionals ONLY. Misuse is illegal

and strictly prohibited. We vet all clients and cooperate fully with law enforcement.

This product at the enterprise tier can bypass windows defender on windows 10/11 with uac bypass. Sales are paused until the new update is finished, ill post here about it soon. thanks for your interest.

casperr - January 17, 2026, 1:48 am

Looks good , Vouch copy available?

peewee101 - January 19, 2026, 8:57 pm

I love your uniqueness and creativity

SpiderSpicy - *January 20, 2026, 10:32 am*

This really looks clean and neatly. Keep it going the hard work!
