any one know any good browsers for opsec

Mech - July 3, 2025, 10:08 am

Start with the obvious TOR.

Brave is another solid choice for blocking trackers and ads while maintaining speed.
For extra layers, you should combine with a VPN.

It really depends on what level of privacy you're looking for. You could use something like FireFox or Brave, or for a heightened level of privacy MultiLogin Browser, MoreLogin or GoLogin.. or for total privacy, you could opt for Tor. All work great, the one you should choose is dependent on your use-case.

HerrWinston - July 19, 2025, 12:19 am

like many suggested, tor is the go to for opsec, but it really just depends how much privacy is needed, you might aswell use duckduckgo lol

sharn - July 19, 2025, 12:16 pm

Tor Browser is good for anonymity, but it is slow. If you need speed, try Brave.
Pair it with a VPN for added security.
