Thread: [ChatGPT can control your computer](#)

Rsynced - July 4, 2025, 9:12 am

<https://www.fry-ai.com/p/chatgpt-can-control-your-computer>

Maybe I am ratted or hardware issues. (or mental issues) Getting restarts and weird keyboard typing stuff. Mouse has not started moving on it's own and nothing has opened notepad and started talking to me yet... so I think the AI is doing something to my windows 10 OS.

IDK, Going to wipe now Elliot.

Check the System Event Log regarding the restarts. If text is being typed when you're not typing, that is a clear IOC.

No text being typed, just sometimes it gets deleted, so weird. Like for example I can be typing a forum post and it just backspaces on it's own. I go out and have a cig and come back my computer has restarted.

Stuck keys, driver glitch, keyboard short, could be a lot of things.

Just had another user confirm in convo it is the forum. MyBB glitch accidently spams convo and obviously effects forum posts.

I suppose I can report it.

ItsMeFox - July 4, 2025, 11:07 am

Reinstall the operating system, maybe something is wrong or maybe you have been hacked, who knows!

im not an expert, im just guessing

It's the forum, the convo is bugged also, randomly spams

Oh ya, I think the restarts are from overheating, I fried my laptop AFK farming on Minecraft. The case is all warped and melted, the keyboard is raised up from it.

Geez, dude. Install HWMonitor on it and log the temps. I thought that my old Lenovo Y410 with the scorch marks around the edges was bad.

I left it mob grinder farming for like 3 days straight. I turned gfx all the way down but I forgot about it. I am surprised the server did not kick me, my guy was still auto-clicking killing mobs but somehow pigs and skeleton horses also spawned, I built my own skyblock type base on the simply vanilla survival server. ?

The Pact - July 18, 2025, 6:18 am

The New Yahoo deletes emails as I type them and also checks boxes I didn't check making the email disappear.

IDK, I think it is some sort of server side database issue.

7 - July 18, 2025, 9:20 am

Did you fix the issue? Or is it ongoing

Rsynced - July 18, 2025, 9:34 am

(Jul 18, 2025 09:20 AM)7 Wrote: [\[CITE\]](#) Did you fix the issue? Or is it ongoing

It seems fixed, I do not think it was ChatGPT, but also I stopped using ChatGPT and removed it from startup. I do not trust it to say the least since it come preinstalled on all modern windows computers :(

I think it was a server database or server RAM issue on HF's side.

Jamika - July 18, 2025, 5:08 pm

Use antivirus man , this is virus for sure , chatgpt is not that smart

Rsynced - July 18, 2025, 5:12 pm

I scanned everything, no virus, I know how to use all the good scanners, USB ones etc.

Also cmd: sfc /scannow and multip disk checkers.

No virus, it was the website, still happens sometimes, I am typing a reply / post and my text gets deleted / backspaced.

Seems like the same stuff on other platforms, seems like a MYSQL database or RAM issue.

The Pact - July 21, 2025, 5:49 am

Whoops never mind this post as I misunderstood what I was replying to.

Hopsin - July 22, 2025, 12:38 am

CleanInstall solves most of them problems. ChatGPT is not that smart.

It's not about it being smart, I know for a fact ChatGPT could be considered malware considering it is constantly data mining every user in the world.

VictoryWayBeat - July 23, 2025, 2:34 pm

Sounds like a RAT or something messing with your system, could be hardware too. If your mouse isn't dancing yet and Notepad's not talking to you, you've still got time to run a deep scan and figure it out :)

Hopsin - July 25, 2025, 1:57 am

But who is forcing us to use ChatGPT ? Or even AI in general?

hatsxcv45mikono - July 25, 2025, 6:40 am

i dont think ai can control it yet

I-I - July 26, 2025, 1:38 pm

This is a feature you have to pay for and enable.

To me it sounds like you spilled something on your keyboard and mouse that isn't just water. If you create electric shorts on your keyboard's PCB it can cause the issue like you describe. As for the mouse that can also happen with spills, or something over the optics (check bottom of mouse to

make sure it's clean)

GL, I doubt you're pwned but I understand the paranoia. Maybe try a new keyboard before you wipe your drives [^^]_/

Sky is Blue?

Do you use a wireless keyboard?

I've personally seen a wireless keyboard/mouse combo dongle pick up interference and move the cursor or type random letters.
