Thread: [Can I just Microwave my whole laptop to wipe?](#)

Rsynced - July 4, 2025, 11:52 am

Anyone try this? If I take the battery out can I just nuke the whole thing using an extension cord in the backyard? It is the 4th of July, so no one will notice here in Florida.?

DISCLAIMER: I will be using safety equipment and electricians code when preforming this experiment.

DO NOT TRY AT HOME IT COULD KILL YOU.

Sam - July 4, 2025, 12:08 pm

A microwave isnt reliable to erase or destroy a hard drive. Putting a laptop in the microwave is just stupid and dangerous regardless of whether it's outside or not.

Ok Mr robot just uses a drill for the HD

Riot - July 4, 2025, 1:07 pm

I honestly wouldn't trust it depending on the sensitivity of the data you're trying to destroy. If so I'd burn it and then bury it in a secluded area (just the HDD removed)

mate if your name is Michael and you used to RAT with a partner we need to have a convo lol.

No, My name is Joe. No rats.

The video I posted seems like it is not what I am looking for... Maybe if I mixed in something to do with this?

<https://bigfireworks.com/60-gram-maximum-load-canister-shells/>

Google says this is the largest legal mortars I can buy @ 60 grams per shell.

EDIT

DAMN IT OUT OF STOCK:

Drilling your hard drive may not be enough. The viros may have spread into your motherboard and cpu. You need to exercise your laptop.

Ok, I heard of the viruses that can get into the intel chips. I mean I could just take the hard drive and ram out + battery and throw it in the creek but it could hurt the wildlife and technically polluting city land. I was thinking just blow it up with a mortar since it's the forth of July, just feeling too old for this kind of activity to be fun again.?

Helltoy - July 18, 2025, 2:36 pm

So what would be actually fastest way of destroying hard drive?

Rsynced - July 18, 2025, 4:44 pm

Drill and drop into the deep ocean I think. Imao ? Volcano maybe?

Mooooookie - July 18, 2025, 5:26 pm

Can always expect some good entertainment when it comes to a [Rsynced](#) thread.

How's that HD looking? Did you ever end up destroying it?

No, It is still running on this Laptop right now, I am also mining cpu coins on the same system. It's fun, It was a free laptop anyways, already fried it from AFK auto-clicker mob grinder farming on Minecraft. I forgot about it and left it on 3 days straight connected to a server and it warped my keyboard and laptop case, it still runs fine surprisingly.

I was using an advanced version of this build:
