Thread: [Thought Experiment: Pick One Zero-Day to Make \\$100 Million](#)

·CHESTER· - July 10, 2025, 10:34 pm

Let's play a thought experiment. You can choose any single zero-day exploit—Windows 11, Android, iPhone, Linux Kernel, anything you want. Your goal is to make \$100 million. Which zero-day would you choose, and how would you turn it into \$100 million?

How would you convert the iphone zero day into a billion dollars? Don't forget, it will probably only be alive for a few hours before apple patches it.

Linux, then steal hot wallet of an exchange.

Lefty - July 11, 2025, 8:28 pm

It would have to be android. I think that would be the most profitable if done right

I thought about that, but I think they have zero day mitigations in place.
