Thread: [\[NATIVE\] KRYSA MOST POWERFUL RAT | 7500+ CLIENTS | EXTREME FEATURES](#)

Frank_KRYSA - July 11, 2025, 5:57 am

Hello!, I am looking for BETA testers for my RAT, KRYSA, that has been developed to fulfill 3 main points,

EXTREME POWER, 7500+ CLIENTS
FEATURE-RICH, 20+ UNIQUE FEATURES
SIMPLICITY, NO BLOAT, RAT IS SMART ENOUGH TO KNOW WHAT YOU WANT

I do not want to label this as a finished product just yet, as its over 100 thousand lines of code, in a never seen before scale, and written in RUST!.

Impossible to launch a project like this that was built from scratch without a single line taken from other open source projects, without bugs coming up.

That is why, when you purchase, you dont pay for BETA! you will receive 2 months license, the first one is the BETA period that I wont allow you to pay for, you will only pay for the second month! :)

Unavailable to provide videos and images here,
Come check it out here if you're interested!

(Might load a bit due to onion routing)

And dont worry, dont need tor/onion to access the website, can visit it even in chrome thanks to .pe ending, just copy and paste. :)

Here are only a few of the many unique features of KRYSA

Random Obfuscation, and multilayered, each stub unique, to ensure that your payload will not be a big red flag, which is a must.

Polymorphic Enhancement, random and unique to each stub, to ensure no runtime similarities between stubs.

High-Capacity Server, with cookie system!, extremely powerful with custom cookie security, able to handle 7500+ clients.

Advanced Download Manager, a never-seen before transfer manager, pause/play/terminate/limit MBs/limit stress, and much more.

Custom profiles, maximum customizability, build your own profiles, that update, extract, modify, and so on.

Automation, execute on-connect profiles, extraction profiles, even manually to all or certain clients and files.

And so much more, you'd have to visit the above site and view the images and videos to understand the scale of this RAT.

And some basic features that are the standard,
Extreme power and stealth, up-to-date, HVNC.

Extreme power and stealth, up-to-date, Remote Desktop.

Feature rich managers, Registry , File , Service , Process.

2-in-1, concurrent, Remote Terminal and Remote Powershell.

And so much more, you'd have to visit the above site and view the images and videos to understand the scale of this RAT.

And of course, up-to-date info extractors, with extreme stealth.
130+ Browsers, 100+ Extensions, 30+ Desktop Apps, Target Package, build-your-own functionality.

BETA period access, which will give you 2 months license, is priced at 150USD
Also, to note, KRYSA is currently limited to only work on WINDOWS systems for now, LINUX and MACOS support will come soon.

TO SHOW APPRECIATION TO THE FIRST CLIENTS, THE FIRST 5 WILL GET LIFE TIME LICENSE (NO JOKE!)

The only account you should query for purchase is this account, I do not have a telegram yet, or any other account, on any other website, please do not deal with anyone that is not this account, do not get scammed.

And once again, here is the website with images, videos, and feature descriptions.

If any questions, please feel free to message, or comment!, and if you'd like to become part of the project behind-the-scenes, and got something that can help distribute/promote, message me! as a no-life-coder, that help will be appreciated

Thanks for the advice, Im already working on doing just that, but first want to drop a modified version of the stealer module, for free with source code later today! :)

HerrWinston - July 13, 2025, 7:19 am

this sounds fairly interesting, just dont have 150 USD on me, if you have a vouch copy i may test it

how dumb someone gotta be (like me) to still understand it lol.

But like the other one said, beeing new is always suspicious.... but good look and if your legit i hope you get good sales ?

brizy007 - July 15, 2025, 3:11 am

what are your contact details?
