Thread: [RidgeBot AI The Future of Automated Penetration Testing - 650\\$ - Lifetime](#)

Vulcanmento - July 12, 2025, 2:45 pm

AI-Powered, Continuous Security Testing for Modern Enterprises

In today's fast-evolving threat landscape, manual penetration testing is no longer enough. Organizations need fast, accurate, and continuous security validation to stay ahead of attackers. That's where RidgeBot comes in—an AI-driven, automated penetration testing robot designed to proactively hunt vulnerabilities before hackers exploit them.

Why Choose RidgeBot?

- ? Fully Automated Penetration Testing – No human bottlenecks. RidgeBot executes real-world attack simulations 24/7, mimicking advanced hackers.
- ? AI & Machine Learning Enhanced – Learns from each test, adapting to new threats faster than traditional tools.
- ? Compliance-Ready Reports – Generates detailed, actionable reports for PCI-DSS, ISO 27001, NIST, GDPR, and more.
- ? Zero False Positives – Unlike traditional scanners, RidgeBot verifies vulnerabilities by safely exploiting them, ensuring accurate results.
- ? Cloud, Web, API & Network Testing – Covers all attack surfaces: from cloud infrastructure to web apps, APIs, and internal networks.

Key Features

- ? Autonomous Hacking Engine – Runs OWASP Top 10, MITRE ATT&CK, and custom attack scenarios.
- ? Continuous Security Validation – Integrates with CI/CD pipelines for DevSecOps, ensuring secure deployments.
- ? Agentless & Safe – No software installs needed; operates without disrupting production environments.
- ? Remediation Guidance – Provides step-by-step fixes for every vulnerability found.
- ? Multi-Cloud & On-Prem Support – Works with AWS, Azure, GCP, Kubernetes, and traditional networks.

Who Needs RidgeBot?

- ? Enterprises – Proactively secure critical assets with continuous testing.
- ? MSSPs & Security Teams – Scale pentesting without hiring more experts.
- ? DevOps & Developers – Embed security early in the SDLC with automated scans.
- ? Compliance Officers – Stay audit-ready with real-time vulnerability proof.

RidgeBot vs. Traditional Pentesting

Feature	RidgeBot	Manual Pentesting
---------	----------	-------------------

Speed	Minutes to hours	Days to
weeks		
Cost	80%+ savings	High
consultant fees		
Frequency	Continuous	Once or
twice a year		
Accuracy	AI-verified exploits	
Human-dependent		
Scalability	Unlimited tests	Limited by
manpower		

I know i know, new profile no much posts, blabla blabla, but i can guarantee trough discord streaming or screensharing that this isnt bullshit,

I used to sell this shit trough Archetyp before it got seized, cba making reputation here on the clearnet.

I used to sell this tool to private companies too trough quote based and cut prices, and whoever is willing to be effective into pentesting/bug bounty hunting, and earn shit ton of money.

Price : 650\$, Crypto.
One Time Payment, Lifetime.

Upon purchase you will receive a .txt file with multiple .zip download links and password protected , as the file is kinda big, you gotta download all the archives and then extract the number 1 only, will extract the rest automatically.

Dropping other interesting tools like this one soon, stay tuned.

(Jul 12, 2025 03:34 PM)Lowkey Wrote: [\[CITE\]](#) Do you have any demo videos that aren't specific to needing discord or similar to view a screenshare that you could post?

Idk if streamable link are allowed as member or i'm forced to upgrade somehow, but i can send you one in dm if you want

Will be Proof of API pentesting + Attack Surface table list and Vulnerabilities report (Type of vuln, the details + solution and so on..)

Hi @Vulcanmento

Do you have any idea to sell the entire product to me?, means I am planing to acquire your product. Obviously demo is required before taking the final decision.

May I know the price?
