Thread: [Hacxx Car Fob Signal Simulator](#)

**lightduty** - July 13, 2025, 3:02 am

Car Models Included:

- Holden Commodore VE (2006-2013)
- Subaru Impreza (2008-2011)
- Subaru Levorg (2014-2020)
- Toyota Hilux (2005-2015)
- Toyota Land Cruiser (2007-2016)

Simulation Details:

- Shows frequency (315 MHz or 433 MHz)
- Indicates code type (Fixed or Rolling)
- Simulates signal transmission with status updates
- Includes a simple beep sound effect

This is called a replay attack and i'm almost certain this won't work without a jammer for Rolling types because you actually have to understand implementation and communication between the car pc and the key. Another thing I'm curious about is what you actually use as a repeater (which device) with this app.

You're right, rolling codes require more than just replay. For this tool, pair it with an SDR (like HackRF or RTL-SDR) or a universal repeater (e.g., Proxmark3 or Yard Stick One) to capture/transmit signals effectively. Rolling codes may need jamming or advanced interception and some code editing, but fixed codes can work with replay. Always test responsibly.

Thanks for the quick response, interesting content buddy.
