Thread: [Free crypter source code ?](#)

Danny65 - July 16, 2025, 9:45 am

Hey ! I saw some threads by Nodes talking about free crypter and I wanted to learn how an advanced crypter works. Does anyone know some free source code of latest crypter of Nodes or another which can highly reduce detections and have advanced stub ? Or is there only private crypters which have this characteristics ?

Probably not much that you can learn from his old crypters. They won't be much help for evading AV detection.

Just convert your .exe to bytes, then encode those bytes in custom encoding algo.

Create node or what ever u want that on runtime it decode using algo bytes and executed them in free before decode allocated space.

Wow thanks a lot for the answer ! Do you have some articles, GitHub repo or process name to share ? It seems like a kind of process hollowing with shellcode decryption ?

Nodes' TOS says specifically that you cannot use the code for malicious or illegal use cases.

If you are using any code referenced, or modified by others, or distributed, it is against the TOS and an illegal violation of the software license.

This should be clarified to ensure all users now or in the future understand that encryption licensing or loading software should never be used for illegal uses.

I am sure nodes would not be happy!
