Thread: [how can i hack a wifi using metasploit, or kali](#)

SaritaSola - July 18, 2025, 5:12 am

hello guys,

remember me? the same cat of the same other post Meoww~

Grrr dont look at me like that..

cut the scenario... lets get back to work, i actually wanna hack a wifi, i have 4 wifis opened but i just wanna leran something new so i maybe go out side and need to connect to a wifi...

and sometimes i need it at the theater while i'm there, any way....

i have win 10, and kali in virtualbox

i may install kali on another hard if needed so it can be separately to get full aces, or can i search wifi availble over virtualbox?

-runs away-

DramaKing - July 18, 2025, 5:36 am

You're not cracking WPA2 in 10 min. while you're out somewhere. Simple known passwords could be cracked within 10 hours using a powerful GPU.

SaritaSola - July 18, 2025, 6:39 am

i was just talking with a friend, and he told me to do somethings like

study CCNA STC ... so i guess i will start learning them from scratch so i can understand my surroundings...

anyway i will still be MEOWING here in the forum , not gonna leave sure i will learn something new from here

since i'm still ... - turns around looking for something- dunno what i'm looking for yet !

thank you

Dude, password cracking can take years. That's why you should use strong, unique passwords. PBKDF2 is not some simple, easy-to-compute algorithm.

And yeah, getting your CCNA will help you to get a legit, entry-level job.

SaritaSola - July 18, 2025, 7:19 am

OMG years!!

in caffees i used to visit they do passwords alike 14014012 or aabbvv10 things like that, and they simply give it to me if i ask , but i would like to hack it, just to feel i'm doing some thing lol, and to discover how many people are using it, and if i can interact with someone using the same wifi i guess that would be cool , it is for me just like a game

studying the CCNA would be great, yeah i must do it ... im already downloading the course including 63 video of it to study it right away

DramaKing - July 18, 2025, 7:30 am

I get it. An i7 from a few years ago could bruteforce the latter password with the right mask in 6-7 days at most. Once you crack it, you can play around with airdecap, although doing so for any reason can violate wiretapping laws.

SaritaSola - July 18, 2025, 8:14 am

well, not really gonna be a trouble for laws for me since i wont be there for a long time, just few moments and then i will disappear

but 6 to 7 days!!! thats too much

Buy or rent a RTX 4090 or RTX 6000 Ada. Much faster.

[Video: <https://youtu.be/nHDixd-EdEQ?si=jM3t-YkNxPckzOS2>]

It means you come across as suspicious.

If you are actually serious and having the wifi at a particular theater is important to you,

Apply for a job at the theater.

Ask another employee for the password or find the wifi box and copy it off the back.

If they changed it(unlikely), then it will be written down somewhere or someone will know it, snoop around just don't be obvious.

Once you get it quit.

Better than paying for movie tickets to sit there and crack it, at least you will get what you want and get paid if you go the job route.

SaritaSola - July 18, 2025, 12:21 pm

omg!!!

MEOOOWW~

no way i was giving the theater as an example, but i just wanna hack it, they will easily give it to me if i asked, i'm already an actress in there, but still i need to do the job by my self... some places wont give the wifi to any body! or simply say it doesnt work!!

plus i would like to open it just to be able to see who is connected and on, until i know how to sneak into their phones through the wifi...

i'm learning and i guess hacking a password is the very first step i must take

Rax_ - July 18, 2025, 12:44 pm

I see, though if you are learning and you are not trying to achieve something its better to experiment with your own network/devices.

That isn't how it works, you cant just crack the wifi and hack peoples phones. Its theoretically possible but requires you finding 0 days in modern well secured devices.

This is not only impractical but also would require a lot of work an knowledge.

To achieve what you want, look into, man in the middle attacks, Ssid spoofing and rogue access points.

The basic gist is that you set up your own malicious network and steal their data as it passes through your machine. You can spoof the credentials of a legitimate network to make them auto connect to your if you are specifically targeting people who are connected to the theater network for example.

I'm not sure if I need to point out this is a serious crime though and not something you want to be caught doing.

i will be just doing that for fun, not to do steal someone anything, or even not gonna let them know i was there

DeathPenalty666 - July 19, 2025, 4:32 pm

best tools are under kali! aircrack is a most have but it require a usb wireless adaptor with packet injection and monitoring in order to work. You can find some for 15\$-120\$ range. Or if you want to get this done on autopilot you can build a pwagotchi for around 80\$, its ai driven and crack wifi auto

in fact its all it do haha.

SaritaSola - July 19, 2025, 5:37 pm

omg a lot said it can be done freely lol, i pay for my wifi 400GB monthly just around 6\$ and having another one 140GB but it can be moved from house to another for 9\$ per month and 2 free wifis at my work, why would i pay 80\$ to buy a tool helps me to hack a wifi lol

DeathPenalty666 - July 19, 2025, 6:19 pm

(Jul 19, 2025 05:37 PM)SaritaSola Wrote: [\[CITE\]](#) omg a lot said it can be done freely lol, i pay for my wifi 400GB monthly just around 6\$ and having another one 140GB but it can be moved from house to another for 9\$ per month and 2 free wifis at my work, why would i pay 80\$ to buy a tool helps me to hack a wifi lol

to hack wifi it need a adaptor with packet injection and monitoring! if your pc dont handle this you need it. you can use a twin evel portal tricks, but you will need a esp32 to take down the ap, one wifi adaptor to run the fake ap and one to catch the user data input.

you can find a wifi adaptor 2.4/5g that work for like 30\$ on amazon. check the zsecurity. Oryou can turn one of your oruter or get one cheap if theyare compatioble and make a custom pineapple but will require a wifi adaptor with packet injection and monitoring this isa required step! you can try without but you wont be able to get the packet data they will generate the pkg file with the password.

you dont HAVE TO MAKE THIS TOOL, but that 80\$ device is made to crack wifi, everywhere and all thetime without needing you to make any single interaction. you only need to bring your small device of a OG mp3 size and let it do his work. it wont help you to hack wifi IT WILL HACK THEM ALL for you well all he can crack in without any interaction lol.

If wifi are properly configured you may need to spend some time to crack using all method, THIS DEVICE WILL DO IT. if you just need internet connection everywherebuy a fonus subscription, its 20\$ a month for phone sms voicemail 3g/4g/5g and data illimited lol. work in 51 country and there no additional fee if you travel soewhere else xD

cracking wifi can make it cheap but if there is a limited wifi available, and the user hide their network or limit the device that can access it wont be helpfull and also require to get your laptop and a adaptor compatible and learn all method lol. honestly i got one pwagotchi newest model and it crack most wifi around under 2min without need to use any other device. wont proceed the old way anymore lol. when i cannot crack in i get my esp32 to take down the ap and run a fake ap from my laptop and catch user data when he re-enter his wifi password and its done :D

SaritaSola - July 20, 2025, 1:11 am

thats great to provide you a free wifi without you do the work....

but it is different in here , i need to crack it to study hacking, if you read my posts in the forum, i even downloaded tor browser to get books about hacking to study them, thats my goal, not to get free internet i dont mind paying it lol

yesterday to be able to connect while im in the car i was using my mobile data to open hotspot for the laptop, it is not the problem about the internet it self

i said before i'm studying the hack... well since a week...

and i wanna feel like i'm already doing something in here , thats all... i wanna feel how can i hack something even if i hack my microwave i dont mind.... i just need to be able to do something

DeathPenalty666 - July 20, 2025, 1:47 am

hoo gotcha! Then in other side than cracking wifi, the evil portal and twin evil is another method used to crack wifi and also get all data input of an user on the fake network. it usually work with a esp32 but i foudn recently a version that not require usb adaptor soecuak, work with standar wifi (2x one to generatefake ap and second to generate webserver to catch credidential and data input) that totally worth working with.

best tools to dive in are aircrack, wifite2, nmap and hydra(bruteforce tool) and for cheap budget a esp32 is ideal little board to driive test and understand deeper how wifi and bluethoot work.

fun fact, you know recent car can have wifi right? well many of those mobile remote control are for most of them vulnerable to the old wps exploit, brand like vw, chevrolet and most with wifi remote.

SaritaSola - July 20, 2025, 2:03 am

umm here we say that if we are at any transportation , sure it is not my car... i will not driving and using my laptop, unless i want to be ended like doctor strange!!!
