Thread: [how to make a 3 way private message?](#)

johndoeman805 - July 26, 2025, 5:44 am

or how to invite an additional person into a private message with someone (so in a nutshell its a 3-way convo?)

-thx sorry for the stupid question. still learning my way around

Wrote this for you :)

How to Start a 3-Person (or Group) Private Message on HackForums:

1. Go to your Inbox – Click on "Private Messages" in the top navigation.
2. Click "Send New Message" – This is usually at the top or side of your inbox page.
3. Add multiple recipients – In the "Recipient Username" field, type the usernames of the people you want to message, no need to add commas.
4. You can add up to 5 recipients – HackForums allows a total of 5 people in one PM (including yourself).
5. Write your subject and message – Just like any normal PM.
6. Send the message – Everyone included will be able to see and reply in the same thread.

This!

Plus you can also do the same for convo: <https://hackforums.net/convo.php?do=send>

I could fix it before you quoted me. Initially, I had "separated by commas (e.g., User1, User2)". In saying this you dont need to add commas :)

m0hx - July 26, 2025, 6:26 am

we got threesome private messages before gta6
