Thread: [\[BETA RELEASE\] Metaphish Advanced Phishing Platform \(GoPhish++\)](#)

thecrowsec - July 27, 2025, 12:50 pm

Hey security folks ?,

I'm excited to announce the beta release of Metaphish — a powerful phishing platform built from the ground up to outperform GoPhish and meet the needs of modern red teamers, security awareness managers, and threat simulation teams.

? What is Metaphish?

Metaphish is a client-server phishing framework that supports:

- ? Realistic multi-channel phishing (Email, SMS, Voice)
- ? Campaign modes (Live, Testing)
- ? Advanced spoofing & evasion features
- ? Real-time tracking, reporting, and target validation

? Beta-Ready Features

? Campaign Modes

- Live – Production-ready campaigns against real targets
- Testing – Safe testing mode for QA, internal review, or payload trials

? Multi-Channel Campaign Types

- Phishing – Email-based, pixel tracked, and redirect capable
- Smishing – SMS delivery with dynamic link shortening and tracking
- Vishing – Voice campaigns with audio prompts and call tracking (via external integration)

? Delivery & Obfuscation Features

? Sender Rotation

- Rotate From, Reply-To, and envelope senders to improve delivery and avoid detection

? Subject Rotation

- A/B test subject lines to improve engagement and simulate real-world phish variability

? Body Poisoning

- Obfuscate key phrases
- Embed junk HTML/CSS for spam filter evasion
- Dynamic payload injection per recipient

? Template Editor (Powerful & Flexible)

- Visual HTML editing
- Real-time rendering preview
- Dynamic variables ({{first_name}}, {{role}}, {{track}} etc.)
- Custom X-Headers and MIME header injection

? Target & SMTP Validation

Email Score Validation

- MX & domain checks
- Syntax & format scanning
- Deliverability scoring

SMTP Configuration Checks

- Validate SPF, DKIM, and DMARC
- Auto-check blacklists and open relay issues
- Per-campaign mail server diagnostics

? Tracking & Campaign Intelligence

- ? Pixel Tracking – Monitor email opens, geolocation, device metadata
- ? Entry/Exit Redirects – Redirect chain simulation (e.g., link -> fake login -> training portal)
- ? Analytics Dashboard – Engagement heatmaps, click maps, per-user reporting

? Access & Architecture

- Client-Server Model
- Audit Logging for compliance & traceability
- REST API for full automation and platform integration

? Tech Stack

- Backend: Node.js (Express + custom modules)
- Frontend: React + Tailwind
- Database: PostgreSQL
- Deployment: Docker-ready, K8s-compatible

? Now Accepting Beta Testers

We're currently onboarding a limited number of beta testers to help shape the future of Metaphish.

- ? Test real campaigns
- ? Report bugs, suggest features
- ? Priority support and early access to future modules
