Thread: [Self taught backend web developer \(TS/PHP\)](#)

**Biggy\_Asian** - July 28, 2025, 7:10 pm

Need someone to write your project or modify an existing project because you are too "busy"?

Languages: TypeScript, Embedded JavaScript (EJS)

Example of my capabilities Database Connections/Handling (Read/Writing)

Rewriting/improving pre-existing logic/systems

Account like systems/functions

Custom API systems

My code is usually easily read, easy to maintain and as least complex as possible.

If you need help understanding logic or systems I have written then I will explain it to you, I do also leave comments in my code to sum up or explain specific/whole blocks of logic/systems.

If there is any systems/frameworks/languages that I have not listed do contact me, inform me on what you're using or plan desire that are not listed and I will let you know if I have some experience with such.

Please first discuss your project with me before opening a contract. Will contact when I am available

I wrote this very early in the morning. I will eventually edit/rewrite parts if not all of this post.

Depends on the project really. Price scales by size, work and effort.
