Thread: [Question for those who brute force](#)

btscotty - July 30, 2025, 11:08 pm

Do you recommend an RDP or virtual machine for brute force attacks and if so which rdp services do you guys recommend? I heard ram and graphics card play a huge role as it can make the attack quicker. Correct me ifi 'm wrong im no expert lol. My computer is super fast I'm tempted to use it but i don't want to expose my main machine.

Sounds like a terrible waste of money. You're also wrong. And the last thing you want to do is flood a target with logins.

Don't touch your main system: run the brute-force tools inside an isolated VM or a disposable VPS you control yourself. That way everything stays sandboxed and safe.
