Thread: [Dualsense controllers are way too expensive](#)

**Roy Gary** - August 1, 2025, 8:39 pm

I game on a PlayStation and a PC, but frequently use the console more because of Console Valorant. My controller is suffering from stick drift and I don't want to spend on a pro controller. I just feel like all of these controllers are a huge scam

I just feel like all of these controllers are a huge scam these controller pack many tech! they are bluethoot, they pack vibration, gyro, light on them are not for fun but used to be tracked while playing vr, trigger are sensitive. All this make the cost going up. You cant have more for less, life isnt like a wish ads

All this make the cost going up. You cant have more for less, life isnt like a wish ads I understand that. It's literally just the sticks that are manufactured poorly or designed poorly. Everything else about that dual sense controllers are great.

I'm going 2 years strong with a Dualsense Edge and no stick drift. Highly recommend one of those if you can end up saving for one. I know you said you don't want to spend the money on one, but totally worth it. Maybe you can find a good used one.

Upon reading reviews, it seems to suffer from the same BS stick drift and modules are either out of stock or sold out often. I'm just afraid of getting something that also won't last long despite being modular.

The Edge allows you to change the dead zone of the analogs sticks. Even if you do get a slight stick drift, you can adjust that to fix it. I feel like every controller out there is prone to stick drift.

I actually ended up buying one after reading more reviews.
