Thread: [Flipper Zero Esp32??](#)

zombie5000 - August 3, 2025, 6:09 am

I recently got a flipper zero with a wifi dev board flashed with the marauder firmware. Is there anyone out there willing to teach me how to implement this tool??

Are you trying to get access to WiFi networks? It can't do that. I'm sure that you can find out about those on YouTube, however.

Here is a set of commands for that firmware.

<https://github.com/justcallmekoko/ESP32Marauder/wiki/cli-usage>

DeathPenalty666 - August 3, 2025, 2:38 pm

i suggest you to switch from stock firmware to momentum first at all.

zombie5000 - August 4, 2025, 1:40 pm

i have the latest momentum firmware and i can use the maurauder app with my wifi dev board i guess my question has more to do with the esp32 maurauder capabilities vs. the flipper zero itself. just a newb trying to learn more haha thanks guys

Legolas1409 - August 24, 2025, 9:44 am

Is there a way to do the same thing with the esp32 on WiFi 5 or 6? Because it can do on 2.4 but idk if those other ones even exist

ghxstpepper - September 14, 2025, 9:47 pm

The ESP32 is severely limited by the 2.4 GHz Wi-Fi it can attack. That in mind - I can show you how to make an evil portal or deauth.
