Thread: [android apps for hacking](#)

vijaypoco6 - August 4, 2025, 2:20 am

what are current android apps/ apk which we use for hacking?
since many older tools become obsoilute
also any speical android tool for wifi braking? dont tell obsious like wigle
note:- typing mistakes made delibratly

MyCoCkStInKs - August 4, 2025, 2:59 am

FCuK OOGle

Current Android Tools for Ethical Hacking (2025)

NetHunter (Kali Mobile)

- Full-featured mobile pentest OS
- Includes tools like Metasploit, Burp Suite, Wifite, etc.
- Requires rooted device or supported NetHunter kernel

Termux + Packages

- CLI terminal for Android
- Install: nmap, sqlmap, hydra, openssl, python, etc.
- Useful for scripting or light recon

Wifite2 (via NetHunter chroot)

- WPA/WPA2 handshake capture
- Requires external OTG Wi-Fi adapter (monitor mode capable)
- Supports dictionary attacks with wordlists

HushSMS

- Sends specific SMS types (silent, WAP, etc.)
- Useful in SIM/toolkit testing environments
- Legal use only (red team/forensics)

MobSF (Mobile Security Framework)

- Analyze APKs statically/dynamically
- Detect insecure permissions, API use, data leaks
- Accessible via browser UI (hosted or local)

APKTool / JADX / Bytecode Viewer

- Decompile and inspect APK contents
- Useful for analyzing app logic or searching for hardcoded keys

Important:

- Modern Android devices do NOT support monitor mode natively
- Real Wi-Fi testing requires external USB Wi-Fi adapter + NetHunter
- Recommended chipsets: RTL8812AU, Atheros AR9271

Avoid:

- Outdated tools like dSploit, AndroRat, zANTI (mostly obsolete or flagged)

DramaKing - August 6, 2025, 4:39 am

Don't forget Nexmon for custom drivers of certain internal WiFi chipsets. There's also PentestKit Mobile.

vijaypoco6 - August 9, 2025, 1:25 am

unfortunatly I have lava mobile,512 mb ram
