Thread: [How does one break 'Telemetry' connections with Digital ID?](#)

Sniped - August 4, 2025, 8:40 am

Alright guys, so when you see an ad on social media, have you ever questioned how accurate it shows you the right ad at the right time?

That is because we get profiled through our OS, Apps, and Accounts every second. These profiles are cross linked, theres a whole ecosystem that goes beyond just cross linking too. Buying/selling data, etc.

Just changing your email on accounts isn't enough to break profiling because big tech/data rape us by tracking our device fingerprints, IPs, phone numbers, cookies, behavioral data, social connections, even the bank cards that we use...

For example, lets say there is email 1 and email 2.

If you use email 1 on facebook and youtube, AI/ML can profile you, and will cross link any connections it finds suitable to build a more 'accurate' profile of you.

If you use email 1 on facebook and email 2 on youtube, its harder, however, you can still slip up via IP, device, your friends list, etc.

If you use email 1, you better make sure this email operates on a different IP, device, etc. than of email 2, otherwise there will be a bridge for the ML to profile and connect these separate profiles of you together.

And so it can be done by compartmentalization, using a different name on each account, diff email, VPN, etc. you get the idea. Graphene and Linux make this much easier.

Now we've started to see Digital ID be pushed....

Once that Digital ID is linked to any of your accounts on apps or OS, all your old profiling data will be linked to you and stuck with your government ID, unless you somehow scramble it by creating a new profile that doesnt enable the bridge. What I mean by that, is before digital ID gets pushed, you create new accounts, change your IPs, your devices, and so on to create a separate profile, that when linked to Digital ID doesn't pull any of your old profiling.

But wait, it goes even deeper... they can profile you by facial recognition through profile pictures and other images you use.

Now, I think you get my point. We are at MASS surveillance, and where this is going does not sit right with me at all.

What changes will you make when Digital ID gets pushed? Because for me, I'm moving to full open source and really limiting my use of the apps that ask for ID. The profiling is only going to get better and stronger. From the keystrokes we do, to the scrolling patterns.
