Thread: [\[Ebook\] Save \\$100s/Month on Uber Eats, Grubhub, GoPuff & More!](#)

CyberGiggler - August 6, 2025, 3:41 pm

If you're regularly ordering food delivery, this will pay for itself in a day.

I've developed a simple, clean method that shows you how to generate real, working discount codes directly in your app — so when you place your order, you're already saving \$10–\$15+ per meal.

No sketchy exploits. It's all legit & very much repeatable.

Just a method that leverages the referral systems already built into major delivery platforms — in a way most people aren't using.

? What You're Getting:

? You'll learn exactly how to trigger real discount codes inside apps like Uber Eats, Grubhub, GoPuff — and more

? The method revolves around referral systems — and I'll show you how to consistently get referrals quickly & easily.

? Works on any platform that uses referral-style promos (Uber Eats, Grubhub, GoPuff tested, also adaptable to DoorDash, Postmates, Instacart, etc.)

? Works on both iOS and Android

? Verified in the U.S.

? No fake accounts, no carding, no automation or risky tactics — 100% clean.

? Price: \$10

? Increases by \$5 after each sale

? Only 15 copies total will be sold to avoid saturation

? Realistic savings: \$100–\$200+/month, depending on how often you order

Since this is just \$10 no vouch copies will be given. No refunds will be provided as it's a method that I can't take away from you.

Payment accepted via Crypto (BTC/ETH/SOL)

I can vouch for the method, I can't go much into detail but all I can say is I am now saving tons of money per order.
