Thread: [Offering free crypts for xworm and other .net malware](#)

Curs3d - August 9, 2025, 4:02 pm

Hello,

Im here to offer free crypters. I am not fully undetectable or will ever claim to be. I just like to learn and test here and there. I can encrypt xworm and other .net rats and malware. I use AES with CBC mode, PKCS7 padding, and HMAC encryption. In short this is a free service to get your file lower in detections. Better than nothing, right? ??

dOnT UpLoAd tO vlrUsToTal..... i do this for fun not money, its free so its for me!

original xworm 3.1

crypted

Curs3d - August 11, 2025, 6:34 pm

Should be very close to "FUD" now. You can have startup and persistence enabled on your malware.

Out-put size is large 60-80mb. However, you can use what ever startup and persistence your malware has.

Wish you the best if genuine bro! Need good people around here.

Curs3d - August 13, 2025, 6:34 am

xworm and async rat both tested and verified. 0/24 static detection and bypassing windows defender on 10 and 11.

LOVESOSA098997 - August 19, 2025, 8:35 am

i will pm u

Hey bruv, i see you've got a Free crypts for xworm and other .net malware thing going on. If you don't mind, i'll appreciate a copy. I've personally been being working on the version personally that's based off Xencrypter from way back for educational purposes also. I'll appreciate hearing back from you, i just might learn a thing or two more from testing out your work. I'm impressed it is able to bypass AVG, Avast and Avira, those are some of the most used free endpoint products out there in the market. Thanks in advance

kopfness22 - April 15, 2026, 11:39 am

How is the project progressing?

Still out there testing?
