Removing footer banner from NitroPack (free version) with CSS

I installed this plugin to get a better speed score on one of my sites and because it's free. I'm aware it is [realistically tricking speed tests into better results](#) but for this site it's okay.

I found it funny that it changes the spacing in the inline styles to make selecting it via css to hide it annoying. Once you put a selector for to display:none; on the <div> it will change the spacing to a different variation.

It also uses `#shadow-root` (closed) [[ShadowRoot](#)] to prevent from selecting the elements inside the `<div>`.

I prefer CSS only solutions to JS so here's a couple greedy selector options. Pick one that doesn't hit other elements (you should avoid inline styles to begin with anyways):

[illegible]

```
display: none!important;
visibility: hidden!important;
opacity: 0!important;
}
```

-OR-

```
Code div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"],
div[style$="clear: both !important;"]{
    display: none!important;
    visibility: hidden!important;
    opacity: 0!important;
}
```

Remember to purge cache (website) and empty cache (browser) to see the results of that banner now being hidden.
