Hi, I'd like to request the upload of the following RED TEAM Operator courses, as they're highly valuable for anyone working on offensive security and advanced Windows tradecraft:

RED TEAM Operator: Malware Development – Intermediate Course

RED TEAM Operator: Windows Evasion Course

RED TEAM Operator: Windows Persistence Course

RED TEAM Operator: Privilege Escalation in Windows Course

These courses cover essential skills for red team operations, and having them available would be extremely helpful for continued learning and practice.

If anyone has access to these materials and can upload them, it would be greatly appreciated.

Thanks in advance for your support.
