Thread: [Weekly Tool Drop - Week 1 \[DreamFlow\]](#)

Juoku - August 16, 2025, 1:23 pm

Each week I will try to share tools, methods, or scripts that make life easier.

Big or small, personal or professional, if it helps you work smarter, it belongs here.

? This Week's Spotlight: [DreamFlow](#)

DreamFlow is an AI-powered platform that builds real, working Flutter apps directly from your written prompts. Instead of designing screens and wiring logic manually, you simply describe what you want, and DreamFlow generates a deployable Flutter project.

Why it's exciting:

Prompt-to-App in Minutes – Turn plain English into full apps (UI, navigation, backend stubs).

Real Flutter Code – Clean, editable, and exportable to your IDE and as of now, working on allowing it into FlutterFlow.

AI + Visual Editing – Adjust with an AI agent or tweak in the widget tree.

Cross-Platform – Deploy to web, mobile, and desktop straight from your browser.

Great for Prototyping – Quickly spin up MVPs, then refine with code.

Awesome, thank you and I'm glad this is something you find useful!

Do let us know what you were able to create!
