Cryptonim AI — Fully Automated Memecoin Launcher for Solana

? WHAT IS Cryptonim AI?

Cryptonim AI is a fully automated AI-powered system for launching memecoins on Solana.

You create an idea — AI handles everything: token generation, trend analysis, wallet bundles and stealth launch.

It's like having a team of 15 devs, designers, and analysts.

? MAIN FEATURES

AI Autopilot

- Scans Twitter/X for viral trends in real time
- Suggests name, ticker, and PFP image
- Selects strategy (Farm / Rug / Trap)
- Picks risk level (Low / Medium / High)
- Chooses platform: Moonshot, Pump.fun, Bonk, Believe
- Assigns prewarmed wallet bundles
- Forecasts timing, volume and graph logic

Strategy Engine

3 launch styles:

- Farm: steady growth, for community tokens
- Rug: fast pump -> early exit
- Trap: snipes viral memes & trends

Each adjusts wallet flow, tempo, and life cycle based on conditions.

Risk Management

- Low Risk: 15–30% ROI, steady and stable
- Medium Risk: 40–80% ROI, optimal for early meta trends
- High Risk: 100–300% ROI or zero, fast/aggressive strategy

AI Autopilot selects the best risk level automatically.

? WALLET BUNDLES

Avoid detection with stealth bundles:

- Alpha (6 wallets): light launches
- Beta (12 wallets): diverse bundle
- Gamma (30 wallets): looks like DAO/influencer push

All wallets prewarmed & AI-managed to avoid trackers (Axiom, DexScreener, GMGN).

? DASHBOARD

Track launches:

- Total launches
- ROI per coin, strategy, risk
- Success rate

- Profit analysis over time
- Clean analytics UI

? SUBSCRIPTION PLANS

Cryptonim AI offers 3 access levels:

Starter — 3 SOL (one-time)

- Manual token creation (name, image, ticker)
- Basic strategy + Alpha bundle
- Limited dashboard (No AI)

Basic — 5 SOL (one-time)

- All wallet bundles
- Manual platform/risk/strategy selection
- Full dashboard (No Autopilot/trend scan)

Pro — 8 SOL (one-time)

- AI Autopilot (name, ticker, image)
- Auto risk/strategy/platform
- Twitter/X trend detection
- Auto wallet routing & forecasting
- Full analytics suite
- Pro-only features

? LAUNCH COST

Every launch requires:

- 1 SOL — dev buy layer
- 3 SOL — bundle infrastructure

Total launch cost: 4 SOL per token
