Thread: [CS2 2PC AI | ITHAI : Inclusive Targeting Helper AI](#)

ithalove - August 18, 2025, 12:49 pm

ITHAI (Inclusive Targeting Helper Artificial Intelligence) is a specialized accessibility solution created to support people with disabilities in the world of PC gaming. Its main goal is to break down barriers and make gaming more enjoyable and inclusive for individuals who face physical challenges.

By using a two-PC system, ITHAI analyzes what's happening on the screen and adapts to each user's specific abilities and preferences. Whether someone uses adaptive controllers, eye-tracking systems, or alternative input devices, ITHAI translates those unique inputs into smooth and accurate in-game movements. It is especially helpful for those who find traditional controls difficult or impossible to use.

ITHAI is designed for single-player games or modes with computer opponents, so everyone—including individuals with limited mobility or motor function—can experience the thrill of gaming, train their skills, or simply have fun in digital worlds. Its flexibility and focus on accessibility mean more people can participate, connect, and succeed in gaming communities, regardless of physical limitations.

What You'll Need

Two computers with Windows 10 or 11 connected via the same network (WiFi/Ethernet) or use a capture card setup

Compatible mouse emulation hardware :

We work with popular devices including:

Xenmouse, Makcu, Ferrum (all excellent performance), Moonlink, Blurred, Kmbox BPRO, Kmbox NET, and most other market options

Optimal Configuration (recommended but not required):

Ethernet connection for both systems

Modern CPU on your secondary PC for best performance

Core Capabilities

- ? Advanced targeting system
- ? Automatic trigger functionality
- ? Stealth targeting mode
- ? Multiple detection methods: Lightweight AI, Precision AI, CPU/GPU processing
- ? Instant profile switching via hotkeys
- ? Recoil compensation system
- ? Customizable keybinds for all functions
- ? Visual overlay system - Fuser Mode
- ? Performance testing tools - Debug
