Thread: [PHP / MySQL - Broad Chat Messaging Application](#)

Stumail - August 18, 2025, 5:07 pm

Excited to announce the launch of Broad Chat Messaging Application (BCMA) — a lightweight, mobile friendly web-based chat system built with pure vanilla PHP, AJAX, and MySQL.

Currently looking for testers, reviewers, and early adopters to try it out and share feedback. Suggestions, feature requests, and bug reports are all welcome in order to further improve the system.

Direct Link:

<https://bcma.chat>

Backend: Pure vanilla PHP (no frameworks, minimal footprint)

Frontend: AJAX + JavaScript for real-time message updates

Database: MySQL for storing users, rooms, and chat logs

Secure login & user management

Secure (sanitized inputs, CSRF-ready)

Lightweight (no bloated frameworks)

Fast deployment (just PHP + MySQL)

Multiple branch-specific chatrooms

Real-time messaging with AJAX (no page reloads)

Future Plans:

- Voice message support (record & send up to 10s clips)
- More Admin/Mod tools
