Will Bitcoin price fall to \$110K? Short-term holders sell 22K BTC at a loss

More than 20,000 Bitcoin were moved to exchanges at a loss by short-term holders this week, raising the odds for a BTC price dip toward \$110,000.

Seems like Polymarket rn has highest odds on dumping to 112k this week, though targets above 118k are still at 50%+ combined. Haven't been in the loop for a while nor do I even bother with TA, anyone have some theories for this sharp sudden retracement? Thought Wyoming officially announcing it's stablecoin yesterday would be good for sentiment.
