Thread: [\[PAID HELP\] Need to Reconnect Old DCRAT BOTs Crashed VPS on New VPS with Same IP](#)

skynetT1000 - August 20, 2025, 7:44 am

Hi, I need help with an issue related to DCRAT after my VPS crashed.

What happened:

My old VPS (running DCRAT) crashed and all data is gone.

I set up a new VPS using the same IP and ports as before.

I installed a new DCRAT panel on the new VPS.

But now, my old BOTs are not reconnecting to the panel.

I believe the problem is that DCRAT relies on the old database (from the original setup) to recognize and display the BOTs. Since I don't have the old DCRAT folder or database, the new panel doesn't show any of them.

The BOTs are still out there, still trying to connect to the same IP and port—but the panel doesn't list them.

What I need:

Someone who can help me make the old BOTs show up again on the new panel.

I heard from ChatGPT that one way is to edit the DCRAT source code to add an Auto-Registration feature—so BOTs can reconnect even without the old DB.

If you know another way, that's fine too.

I will pay for your help.

If you know how to solve this (by editing the source, patching the server, or anything else), please contact me. I really need to bring my old BOTs back online.

Send me a message if you're interested.

TG: @skynetT1000999 (<https://t.me/skynetT1000999>)

Thanks!
